business usually software is purchased by a centralized procurement function and is either purchased on a project by project basis or as a large periodic software contract unfortunately purchasing software products does not automatically mean that these products are exploited throughout the organization providing the maximum possible value to the business units several issues call for a structured approach that gets the most business value out of software already purchased the objectives of this approach are to create maximum awareness throughout the organization of the software purchased track software use in it projects and

act if products are not used at all used improperly or insufficiently used facilitate use of software products in projects especially when software products are complex and require a lot of integration we can summarize the overall objective of this approach as ensuring that the business units in an organization obtain the maximum possible value of software products purchased which is also the scope of this ibm redbooks publication the transportation security administration requested a study by the national research council nrc to establish the committee on airport passenger screening millimeter wave machines to evaluate two
