Trust and Power 2017-10-16 in this important book niklas luhmann uses his powers as an analyst of the social system to examine two of the most important concepts which hold that system together and allow it to evolve trust and power he criticises those theoretical accounts whose roots lie in what he refers to as ideologies accounts which use implicit beliefs in particular conceptions of human nature to explain and predict social action in a one dimensional way theories of rational choice and moralistic explanations are taken to task as are the theories of both marx and habermas luhmann s unique scientific sociology underpins every page

and enables him to highlight the potential shortcomings of these narrative approaches underlying this approach is the idea that ideologically based social theory whether critical or conservative is unable to do justice to the complexities existing within the parameters of social systems individuals and the interactions between them he aims to show instead how only a painstaking systems analysis can capture these intricacies although written over 40 years ago luhmann's complex vision of the operations of trust and power provides a wealth of insights of considerable value to scholars and students grappling with contemporary social and economic problems the editors introduction to this new edition and the significant revisions they have made to the translation will help to reveal the richness and clarity of this vision and its relevance to the ways that trust and power operate in today's society

Power System 1903 *Leviathan and the Air Pump* examines the conflicts over the value and propriety of experimental methods between two major seventeenth century thinkers Thomas Hobbes author of the political treatise *Leviathan* and vehement critic of systematic experimentation in natural philosophy and Robert Boyle mechanical philosopher and owner of the newly invented air pump. The issues at stake in their disputes ranged from the physical integrity of the air pump to the intellectual integrity of the knowledge it might yield. Both Boyle and Hobbes were looking for ways of establishing knowledge that did not decay into ad hominem attacks and political division. Boyle proposed the experiment as a cure. He argued that facts should be manufactured by machines like the air pump so that gentlemen could witness the experiments and produce knowledge that everyone agreed on. Hobbes by contrast looked for natural law and viewed experiments as the artificial unreliable products of an exclusive

guild. The new approaches taken in *Leviathan and the Air Pump* have been enormously influential on historical studies of science. Shapin and Schaffer found a moment of scientific revolution and showed how key scientific givens facts interpretations experiment truth were fundamental to a new political order. Shapin and Schaffer were also innovative in their ethnographic approach attempting to understand the work habits rituals and social structures of a remote unfamiliar group. They argued that politics were tied up in what scientists did rather than what they said. Steven Shapin and Simon Schaffer use the confrontation between Hobbes and Boyle as a way of understanding what was at stake in the early history of scientific experimentation. They describe the protagonists divergent views of natural knowledge and situate the Hobbes Boyle disputes within contemporary debates over the role of intellectuals in public life and the problems of social order and assent in

restoration england in a new introduction the authors describe how science and its social context were understood when this book was first published and how the study of the history of science has changed since then

presidential power is perhaps one of the most central issues in the study of the american presidency since richard e neustadt s classic study first published in 1960 there has not been a book that thoroughly examines the issue of presidential power presidential power theories

and dilemmas by noted scholar John P. Burke provides an updated and comprehensive look at the issues, constraints, and exercise of presidential power. This book considers the enduring question of how presidents can effectively exercise power within our system of shared powers by examining major tools and theories of presidential power, including Neustadt's theory of persuasion and bargaining as power, constitutional and inherent powers, Samuel Kernell's theory of going public, models of historical time, and the notion of internal time. Using illustrative examples from historical and contemporary presidencies, Burke helps students and scholars better understand how presidents can manage the public's expectations, navigate presidential-congressional relations, and exercise influence in order to achieve their policy goals.

concepts of biology is designed for the single semester introduction to biology course for non-science majors, which for many

students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives, rather than being mired down with facts and vocabulary. The typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, concepts of biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline in order to meet the needs of today's instructors and students. We maintain the overall organization and coverage found in most syllabi for this course. A strength

of concepts of biology is that instructors can customize the book adapting it to the approach that works best in their classroom concepts of biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand and apply key concepts
