finished products have been perceived as social yet the materials which comprise them are considered raw or natural the social life of materials proposes a new perspective in this interdisciplinary field diverting attention from the consumption of objects the book looks towards the properties of materials and how these exist through many transformations in a variety of cultural contexts human societies have always worked with materials however the customs and traditions surrounding this differ according to the place the time and the material itself whether or not the material is man made materials are defined by social intervention today these constitute one of the most exciting areas of global scientific research and innovation harboring the potential to act as key vehicles of change in the world but this materials revolution has complex social implications smart materials are designed to anticipate our actions and needs yet we are increasingly unable to apprehend the composite materials which comprise new products bringing together ethnographic studies of cultures from around the world this collection explores the significance of materials by moving beyond questions of what may be created from them instead the text argues that the materials themselves represent a shifting ground around which relationships identities and powers are constantly formed and dissolved in the act of making and remaking this volume contains a glossary on terms and terminologies used in the rattan sector the glossary is structured according to the following major sections rattan resources biology management plantations harvesting rattan as a raw material transport storage grading and post harvest handling rattan trade rattan processing for local artisanal uses for industrial level furniture manufacturing and rattan trade in raw furniture and other products in order to give special emphasis to the emerging rattan sector in africa a separate compilation of terms specifically focusing on those used in africa is added how did hawaiian and polynesian culture come to dramatically alter american music fashion and decor as well as ideas about race in less than a century it began with mainland hula and musical performances in the late 19th century rose dramatically as millions shipped to hawaii during the pacific war then made big leap with the advent of low cost air travel by the end of the 1950s mainlanders were hosting tiki parties listening to exotic music lazing on rattan furniture in hawaiian shirts and of course surfing

increasingly they were marrying people outside of their own racial groups as well the author describes how this cultural conquest came about and the people and events that led to it this book explores the interface between clinical dentistry and the management of a modern dental practice it covers a range of business areas including the principles of financial management and the use of financial ratios and indicators in relation to practice profitability there will be an overview of modern marketing techniques including the concept of branding rounds out this essential resource for crafters and collectors alike book jacket meant for undergraduate students of mechanical civil industrial and production engineering this student friendly text on strength of materials has comprehensive yet concise coverage of the course with apt number of solved and unsolved questions conceptual objective type problems neatly illustrated diagrams supported with sound explanation of fundamental concepts it provides the right balance between theory and questions a must have for the students
