change from the end of cash to the rise of cryptocurrencies will transform economies for better and worse we think we've seen financial innovation we bank from laptops and buy coffee with the wave of a phone but these are minor miracles compared with the dizzying experiments now underway around the globe as businesses and governments alike embrace the possibilities of new financial technologies as eswar prasad explains the world of finance is at the threshold of major disruption that will affect corporations bankers states and indeed all of us the transformation of money will fundamentally rewrite how ordinary people live above all prasad foresees the end of physical cash the driving force won't be phones or credit cards but rather central banks spurred by the emergence of cryptocurrencies to develop their own more stable digital currencies meanwhile cryptocurrencies themselves will evolve unpredictably as global corporations like facebook and amazon join the game the changes will be accompanied by snowballing innovations that are reshaping finance and have already begun to revolutionize how we invest trade insure and manage risk prasad shows how these and other changes will redefine the very concept of money unbundling its traditional functions as a unit of account medium of exchange and store of value the promise lies in greater efficiency and flexibility increased sensitivity to the needs of diverse consumers and improved market access for the unbanked the risk is instability lack of accountability and erosion of privacy a lucid visionary work the future of money shows how to maximize the best and guard against the worst of what is to come since the launch of bitcoin in 2009 several hundred different cryptocurrencies have been developed and become accepted for a wide variety of transactions in leading online commercial marketplaces and the sharing economy as well as by more traditional retailers manufacturers and even by charities and political parties bitcoin and its competitors have also garnered attention for their wildly fluctuating values as well as implication in international money laundering ponzi schemes and online trade in illicit goods and services across borders these and other controversies surrounding cryptocurrencies have induced varying governance responses by central banks government ministries international organizations and industry regulators worldwide besides formal attempts to ban bitcoin there have been multifaceted efforts to incorporate elements of blockchains the peer to peer technology underlying cryptocurrencies in the wider exchange recording and broadcasting of digital transactions blockchains are being mobilized to support and extend an array of governance activities the novelty and breadth of growing blockchain based activities have fuelled both utopian promises and dystopian fears regarding applications of the emergent technology to bitcoin and beyond this volume brings scholars of anthropology economics science and technology studies and sociology together with gpe scholars in assessing the actual implications posed by bitcoin and blockchains for contemporary global governance its interdisciplinary contributions provide academics policymakers industry practitioners and the general public with more nuanced understandings of technological change in the changing character of governance within and across the borders of nation states the success of counterterrorism finance strategies in reducing terrorist access to official currencies has raised concerns that terrorist organizations might increase their use of such digital cryptocurrencies as bitcoin to support their activities and researchers thus consider the needs of terrorist groups and the advantages and disadvantages of the cryptocurrency technologies available to them this open access book contributes to the creation of a cyber ecosystem supported by blockchain technology in which technology and people can coexist in harmony blockchains have shown that trusted records or ledgers of permanent data can be stored on the internet in a decentralized manner the decentralization of the recording process is expected to significantly economize the cost of transactions creating a ledger on data a blockchain makes it possible to designate the owner of each piece of data to trade data pieces and to market them this book examines the formation of markets for various types of data from the theory of market quality proposed and developed by m yano blockchains are expected to give data itself the status of a new production factor bringing ownership of data to the hands of data producers blockchains can reduce the possibility of information leakage enhance the sharing and use of iot data and prevent data monopoly and misuse the industry will have a bright future as soon as better technology is developed and when a healthy infrastructure is created to support the blockchain market if you're thinking of buying cryptocurrency in the future consider this if only i'd bought back then sound familiar it probably does because when it comes to cryptocurrency there are so many if only or the one that got away stories 7 years ago you could've bought 1 bitcoin for just 10 cents that same bitcoin is worth over 8000 today 100 dollars invested in 2010 would be worth over 8 million dollars
