this book presents computer programming as a key method for solving mathematical problems there are two versions of the book one for matlab and one for python the book was inspired by the springer book tcse 6 a primer on scientific programming with python by langtangen but the style is more accessible and concise in keeping with the needs of engineering students the book outlines the shortest possible path from no previous experience with programming to a set of skills that allows the students to write simple programs for solving common mathematical problems with numerical methods in engineering and science courses the emphasis is on generic algorithms clean design of programs use of functions and automatic tests for verification dyeing is one of the most effective and popular methods used for colouring textiles and other materials dyes are employed in a variety of industries from cosmetic production to the medical sector the two volumes of the handbook of textile and industrial dyeing provide a detailed review of the latest techniques and equipment used in the dyeing industry as well as examining dyes and their application in a number of different industrial sectors volume 1 deals with the principles of dyeing and techniques used in the dyeing process and looks at the different types of dyes currently available part one begins with a general introduction to dyeing which is followed by chapters that examine various aspects of the dyeing process from the pre treatment of textiles to the machinery employed chapters in part two then review the main types of dyes used today including disperse dyes acid dyes fluorescent dyes and many others for a diverse range of applications with its distinguished editor and contributions from some of the world's leading authorities the handbook of textile and industrial dyeing is an essential reference for designers colour technologists and product developers working in a variety of sectors and will also be suitable for academic use examines dyeing and its application in a number of different industrial sectors deals with the principles of dyeing and techniques used in the dyeing process as well as types of dyes currently available chapters review various dye types right through to modelling and predicting dye properties and the chemistry of dyeing this third edition has been written to thoroughly update the coverage of injection molding in the world of plastics there have been changes including extensive additions to over 50% of the content of the second edition many examples are provided of processing different plastics and relating the results to critical factors which range from product design to meeting performance requirements to reducing costs to zero defect targets changes have not been made that concern what is basic to injection molding however more basic information has been added concerning present and future developments resulting in the book being more useful for a long time to come detailed explanations and interpretation of individual subjects more than 1500 are provided using a total of 914 figures and 209 tables throughout the book there is extensive information on problems and solutions as well as extensive cross referencing on its many different subjects this book represents the encyclopedia on im as is evident from its extensive and detailed text that follows from its lengthy table of contents and index with over 5200 entries the worldwide industry encompasses many hundreds of useful plastic related computer programs this book lists these programs ranging from operational training to product design to molding to marketing and explains them briefly but no program or series of programs can provide the details obtained and the extent of information contained in this single sourcebook delve into this underwater

world with ocean experts sylvia a earle and linda k glover who have devoted their lives to understanding the ocean and who share their insights in this atlas along with those of 27 other scientists and specialists other stunning data and imagery are revealed by the skills of expert photographers cartographers and illustrators ocean an illustrated atlas distills decades of research firsthand observations scientific data and analyses and engages and informs all who may want to more deeply explore the nature of this blue planet accompanying the text are more than 100 maps including 5 extraordinary new maps showing the nature of the seafloor of the major ocean basins in detail not published before more than 170 photographs and three dozen illustrations provide new ways of looking at this amazing place with a perspective on the past present and future of the ocean and on how it relates to human economies health security and the very existence of life book jacket world development report 1994 examines the link between infrastructure and development and explores ways in which developing countries can improve both the provision and the quality of infrastructure services in recent decades developing countries have made substantial investments in infrastructure achieving dramatic gains for households and producers by expanding their access to services such as safe water sanitation electric power telecommunications and transport even more infrastructure investment and expansion are needed in order to extend the reach of services especially to people living in rural areas and to the poor but as this report shows the quantity of investment cannot be the exclusive focus of policy improving the quality of infrastructure service also is vital both quantity and quality improvements are essential to modernize and diversify production help countries compete internationally and accommodate rapid urbanization the report identifies the basic cause of poor past performance as inadequate institutional incentives for improving the provision of infrastructure to promote more efficient and responsive service delivery incentives need to be changed through commercial management competition and user involvement several trends are helping to improve the performance of infrastructure first innovation in technology and in the regulatory management of markets makes more diversity possible in the supply of services second an evaluation of the role of government is leading to a shift from direct government provision of services to increasing private sector provision and recent experience in many countries with public private partnerships is highlighting new ways to increase efficiency and expand services third increased concern about social and environmental sustainability has heightened public interest in infrastructure design and performance every successful manufacturer of blow molded products faces the challenge of utilizing advanced techniques which demand an understanding of the different plastic melt flow behaviors operational monitoring and control systems testing and quality control statistical analysis and so on however these techniques are only helpful if the basic operations of molding are understood to ensure the elimination or a significant reduction of potential problems sharp s dictionary of power and struggle is a groundbreaking book by the godfather of nonviolent resistance in nearly 1 000 entries the dictionary defines those ideologies political systems strategies methods and concepts that form the core of nonviolent action as it has occurred throughout history and across the globe providing much needed clarification of language that is often mired in confusion give me liberty is the 1 book in the u s history survey course because it works in the classroom a single author text by a leader in the field give me liberty delivers an authoritative accessible concise and integrated american history updated with powerful new scholarship on borderlands and the west the fifth edition brings new interactive history skills tutorials and norton inquisitive for history the award winning adaptive quizzing tool developing clean sustainable energy systems is a pre eminent issue of our time most projections indicate that combustion based energy conversion systems will continue to be the predominant approach for the majority of our energy usage unsteady combustor issues present the key challenge associated with the development of clean high efficiency combustion systems such as those used for power generation heating or propulsion applications this comprehensive study is unique treating the subject in a systematic manner although this book focuses on unsteady combusting flows it places particular emphasis on the system dynamics that occur at the intersection of the combustion fluid mechanics and acoustic disciplines individuals with a background in fluid mechanics and combustion will find this book to be an incomparable study that synthesises these fields into a coherent understanding of the intrinsically unsteady processes in combustors discover a new scientific and sensitivities our higher power love for spirituality community reason and trust consciousness beauty and music we are swimming in the global ecosystem the higher power heart and spirit of our lives master the ecotherapy of industrial western society s prejudice to suppress our biological inheritance our instincts to communicate with our planet apply a therapeutic experiential remedy for our destructive greed stress depression and excessiveness problems for our abusiveness and chemical dependency relationships this book details the factors involved in the injection moulding process from material properties and selection to troubleshooting faults and includes the equipment types currently in use and machine settings for different types of plastics material flow is a critical parameter in moulding and there are sections covering rheology and viscosity high temperature is also discussed as it can lead to poor quality mouldings due to material degradation the text is supported by 74 tables many of which list key properties and processing parameters and 233 figures there are also many photographs of machinery and mouldings to illustrate key points troubleshooting flow charts are also included to indicate what should be changed to resolve common problems injection moulding in the western world is becoming increasingly competitive as the manufacturing base for many plastic materials has moved to the east thus western manufacturers have moved into more technically difficult products and mouldings to provide enhanced added value and maintain market share technology is becoming more critical together with innovation and quality control there is a chapter on advanced processing in injection moulding covering multimaterial and assisted moulding technologies this guide will help develop good technical skills and appropriate processing techniques for the range of plastics and products in the marketplace every injection moulder will find useful information in this text in addition this book will be of use to experts looking to fill gaps in their knowledge base as well as those new to the industry arburg has been manufacturing injection moulding machines since 1954 and is one of the major global players the company prides itself on the support offered to clients which is exemplified in its training courses this book is based on some of the training material and hence is based on years of experience a flexible and cost effective alternative to larger overwhelming texts criminal justice the essentials third edition covers all the fundamental issues faced by law enforcement the courts corrections and juvenile justice leaving detailed specifics and tangential topics to the discretion of instructors to cover in class organized around the latest cacrep standards introduction to professional counseling integrates key theoretical concepts with discussion of the practical aspects of the field drawing from their own experiences as counseling practitioners editors varunee faii sangganjanavanich and cynthia a reynolds explore what it means to develop a professional counseling identity emphasizing the importance of intentionality and reflection in practice numerous case studies and practice exercises in this innovative text further personalize the content for developing 21st century counselors introduction to professional counseling is part of the counseling and professional identity series which targets specific competencies identified by cacrep council for accreditation of counseling and related programs as in the successful first edition this book provides straightforward information on plastic materials and technology including the options for recycling plastics with special focus on mechanical recycling this new edition reflects the great strides that have been made to increase recycling rates worldwide in recent years it considers the expansion of infrastructure in the uk to support plastic recycling and major achievements that have been made in gaining widespread public support and participation for recycling schemes specifically the need to manage waste on an individual household level current issues surrounding council recycling of plastic bottles and the practice of providing free plastic carrier bags by supermarkets are also considered biopolymers are expected to have a major impact on plastic markets in the future and therefore some of the issues of biodegradability versus recycling are expanded in this second edition as is the wider context of life cycle analysis and legislation this work focuses on the factors critical to successful injection moulding including knowledge of plastic materials and how they melt the importance of mould design the role of the screw and the correct use of the controls of an injection moulding machine it seeks to provide operating personnel with a clear understanding of the basics of injection moulding the book serves as a first introduction to computer programming of scientific applications using the high level python language the exposition is example and problem oriented where the applications are taken from mathematics numerical calculus statistics physics biology and finance the book teaches matlab style and procedural programming as well as object oriented programming high school mathematics is a required background and it is advantageous to study classical and numerical one variable calculus in parallel with reading this book besides learning how to program computers the reader will also learn how to solve mathematical problems arising in

various branches of science and engineering with the aid of numerical methods and programming by blending programming mathematics and scientific applications the book lays a solid foundation for practicing computational science from the reviews langtangen does an excellent job of introducing programming as a set of skills in problem solving he guides the reader into thinking properly about producing program logic and data structures for modeling real world problems using objects and functions and embracing the object oriented paradigm summing up highly recommended f h wild iii choice vol 47 8 april 2010 those of us who have learned scientific programming in python on the streets could be a little jealous of students who have the opportunity to take a course out of langtangen s primer john d cook the mathematical association of america september 2011 this book goes through python in particular and programming in general via tasks that scientists will likely perform it contains valuable information for students new to scientific computing and would be the perfect bridge between an introduction to programming and an advanced course on numerical methods or computational science alex small ieee cise vol 14 2 march april 2012 this fourth edition is a wonderful inclusive textbook that covers pretty much everything one needs to know to go from zero to fairly sophisticated scientific programming in python joan horvath computing reviews march 2015 this overview of the essential methods of plastics processing includes basic principles theory and technical background information written as an introductory text it enables the reader to understand the broad field of processing technologies and its relationship to properties and applications of plastics materials he argues that the triumph of the image spells death to politics and reduces people to mere symbols book jacket art and artist in society is a compilation of essays that examine the nexus between artists the art they create and society these essays consider how art has changed its form and role both to accommodate newer trends and to fully participate in society divided into six thematic sections the book examines the works of a diverse group of artists working in a range of art forms such as writers milan kundera and judith ortiz cofer filmmakers humberto solás and walter salles performers photographer daniel joseph martínez and feminist activists suzanne lacy and leslie labowitz the analyses of the work of these artists and other artists offer readers an opportunity to explore a number of important issues in art today such as the representation of the other the exploration of alternative sources of knowledge and the construction of the self for the array of works it analyzes this book offers fascinating insights into the art and the artists of the 20th and 21st centuries november 2008 anna schwarz johannes janicka in the last thirty years noise emission has developed into a topic of increasing importance to society and economy in elds such as air road and rail traf c the control of noise emissions and development of associated noise reduction technologies is a central requirement for social acceptance and economical competitiveness the noise emission of combustion systems is a major part of the task of noise duction the following aspects motivate research modern combustion chambers in technical combustion systems with low pol tion exhausts are 5 8 db louder compared to their predecessors in the ope tional state the noise pressure levels achieved can even be 10 15 db louder high capacity torches in the chemical industry are usually placed at ground level because of the reasons of noise emissions instead of being placed at a height suitable for safety and security for airplanes the combustion emissions become a more and more important topic the combustion instability and noise issues are one major obstacle for the introduction of green technologies as lean fuel combustion and premixed burners in aero engines the direct and indirect contribution of combustion noise to the overall core noise is still under discussion however it is clear that the core noise besides the fan tone will become an important noise source in future aero engine designs to further reduce the jet noise geared ultra high bypass ratio fans are driven by only a few highly loaded turbine stages the man who planted trees is the inspiring story of david milarch s quest to clone the biggest trees on the planet in order to save our forests and ecosystem as well as a hopeful lesson about how each of us has the ability to make a difference when is the best time to plant a tree twenty years ago the second best time today chinese proverb twenty years ago david milarch a northern michigan nurseryman with a penchant for hard living had a vision angels came to tell him that the earth was in trouble its trees were dying and without them human life was in jeopardy the solution they told him was to clone the champion trees of the world the largest the hardiest the ones that had survived millennia and were most resilient to climate change and create a kind of noah s ark of tree genetics without knowing if the message had any basis in science or why he d been chosen for this task milarch began his mission of cloning the world s great trees many scientists and tree experts told him it couldn t be done but twenty years later his team has successfully cloned some of the world s oldest trees among them giant redwoods and sequoias they have also grown seedlings from the oldest tree in

the world the bristlecone pine methuselah when new york times journalist jim robbins came upon milarch s story he was fascinated but had his doubts yet over several years listening to milarch and talking to scientists he came to realize that there is so much we do not yet know about trees how they die how they communicate the myriad crucial ways they filter water and air and otherwise support life on earth it became clear that as the planet changes trees and forest are essential to assuring its survival praise for the man who planted trees this is a story of miracles and obsession and love and survival told with jim robbins s signature clarity and eye for telling detail the man who planted trees is also the most hopeful book i ve read in years i kept thinking of the end of saint francis s wonderful prayer and may god bless you with enough foolishness to believe that you can make a difference in the world so that you can do what others claim cannot be done alexandra fuller author of don t let s go to the dogs tonight absorbing eloquent and loving while robbins s tone is urgent it doesn t compromise his crystal clear science even the smallest details here are fascinating dominique browning the new york times book review the great poet w s merwin once wrote on the last day of the world i would want to plant a tree it s good to see in this lovely volume that some folks are getting a head start bill mckibben author of eaarth making a life on a tough new planet inspiring robbins lucidly summarizes the importance and value of trees to planet earth and all humanity the ecologist imagine a world without trees writes journalist jim robbins it s nearly impossible after reading the man who planted trees in which robbins weaves science and spirituality as he explores the bounty these plants offer the planet audubon no marketing blurb this book presents recent advances in dynamics and control of different types of energy systems it covers research on dynamics and control in energy systems from different aspects namely combustion multiphase flow nuclear chemical and thermal the chapters start from the basic concepts so that this book can be useful even for researchers with very little background in the area a dedicated chapter provides an overview on the fundamental aspects of the dynamical systems approach the book will be of use to researchers and professionals alike
