Impact Evaluation in Practice, Second Edition 2015-01-08 the pascos international symposium on particles strings and cosmology series brings together the leading experts and most active young researchers in the closely related fields of elementary particle physics string theory and cosmology astrophysics these areas of research have become increasingly intertwined in recent years each having direct impact on the others in particular there has been a dramatic expansion of ideas from particle theory and string theory that have vast impact on cosmology especially our picture of the early universe and its evolution correspondingly the proliferation of data regarding the early universe and its increasing precision has begun to strongly constrain the theoretical models meanwhile observations of neutrino oscillations and cosmic ray excesses and limits on new physics from colliders and other particle experiments as well as the resulting restrictions on theoretical and phenomenological modeling are becoming ever stronger during pascos99 it became clear that the long awaited era of convergence of these fields is truly at hand the proceedings of pascos 99 reflect the accelerating overlap and convergence of the fields of elementary particles physics string theory and

cosmology astrophysics plenary reviews by leading figures in these fields provide perspectives on these interrelationships and up to the minute summaries of recent progress in the various areas parallel talk summaries focus on many of the topics within each field of greatest current interest and activity both the plenary and parallel writeups are designed to be descriptive in nature and avoid being overly technical as a result the volume can serve as a useful reference for students and professionals in all three fields careful referencing allows further pursuit of a given topic overall the proceedings are unique in that they not only bring together in a single volume comprehensive overview of the great progress being made in all three of these very exciting fields but also provide a snapshot of how particles strings and cosmology are increasingly impacting one another contents strings branes and theoretical particle physics early universe physics particles and large scale structure neutrinos dark matter cosmic rays gamma ray bursts particle accelerator experiment readership graduate students and researchers in high energy physics cosmology and astrophysics keywords particle string pascos cosmology astrophysics
