those tasked with the planning and construction of infrastructure and development operations face an increasingly uncertain context in which they must address risks across a number of different fields these range from the environmental and archaeological to the social political and financial as a consequence the formal and informal practices of stakeholders often incorporate projections of risk and opportunity project risks analyzes this paradigm shift it reviews the origin and nature of these uncertainties and the practices implemented by the actors to mitigate or take advantage of them paradoxically these practices generate new risks and power relations that are not compatible with the collaborative planning model these paradoxes force the rethinking of practices such as project territorialization risk taking in planning and the responsibility of actors as well as the societal and political choices that must be made between the realization of projects and the protection of the environment over the last decades and in line with the adoption of the sustainable development goals sdgs in 2015 cities and regions have played an important part in helping to implement global agendas at local level through their decentralised

development cooperation ddc activities the non destructive evaluation of civil engineering structures in reinforced concrete is becoming an increasingly important issue in this field of engineering this book proposes innovative ways to deal with this problem through the characterization of concrete durability indicators by the use of non destructive techniques it presents the description of the various non destructive techniques and their combination for the evaluation of indicators the processing of data issued from the combination of nde methods is also illustrated through examples of data fusion methods the identification of conversion models linking observables obtained from non destructive measurements to concrete durability indicators as well as the consideration of different sources of variability in the assessment process are also described an analysis of in situ applications is carried out in order to highlight the practical aspects of the methodology at the end of the book the authors provide a methodological guide detailing the proposed non destructive evaluation methodology of concrete indicators presents the latest developments performed in the community of ndt on different aspects provides a methodology developed in laboratory and transferred onsite for the evaluation of concrete properties which are not usually addressed by ndt methods includes the use of data fusion for merging the measurements provided by several ndt methods includes examples of current and potential applications an authoritative guide to the most recent advances in statistical methods for quantifying reliability statistical methods for reliability data second edition smrd2 is an essential guide to the most widely used

and recently developed statistical methods for reliability data analysis and reliability test planning written by three experts in the area smrd2 updates and extends the long established statistical techniques and shows how to apply powerful graphical numerical and simulation based methods to a range of applications in reliability smrd2 is a comprehensive resource that describes maximum likelihood and bayesian methods for solving practical problems that arise in product reliability and similar areas of application smrd2 illustrates methods with numerous applications and all the data sets are available on the book s website also smrd2 contains an extensive collection of exercises that will enhance its use as a course textbook the smrd2 s website contains valuable resources including r packages stan model codes presentation slides technical notes information about commercial software for reliability data analysis and csv files for the 93 data sets used in the book s examples and exercises the importance of statistical methods in the area of engineering reliability continues to grow and smrd2 offers an updated guide for exploring modeling and drawing conclusions from reliability data smrd2 features contains a wealth of information on modern methods and techniques for reliability data analysis offers discussions on the practical problem solving power of various bayesian inference methods provides examples of bayesian data analysis performed using the r interface to the stan system based on stan models that are available on the book s website includes helpful technical problem and data analysis exercise sets at the end of every chapter presents illustrative computer graphics that highlight data results of analyses

and technical concepts written for engineers and statisticians in industry and academia statistical methods for reliability data second edition offers an authoritative guide to this important topic digital technologies are reshaping every field of social and economic lives so do they in the world of scientific knowledge the new challenges of knowledge aims at understanding how the new digital technologies alter the production diffusion and valorization of knowledge we propose to give an insight into the economical geopolitical and political stakes of numeric in knowledge in different countries law is at the center of this evolution especially in the case of national and international confusion about internet science and knowledge muslims beyond the arab world explores the vibrant tradition of writing african languages using the modified arabic script ajami alongside the rise of the muridiyya sufi order in senegal the book demonstrates how the development of the ajami literary tradition is entwined with the flourishing of the muridiyya into one of sub saharan africa s most powerful and dynamic sufi organizations it offers a close reading of the rich hagiographic and didactic written recited and chanted ajami texts of the muridiyya works largely unknown to scholars the texts describe the life and sufi odyssey of the order s founder shaykh ahmadu bamba mbakke 1853 1927 his conflicts with local rulers and muslim clerics and the french colonial administration and the traditions and teachings he championed that permanently shaped the identity and behaviors of his followers fallou ngom evaluates prevailing representations of the muridiyya movement and offers alternative perspectives he demonstrates how the mur

ds used their written recited and chanted ajami materials as an effective mass communication tool in conveying to the masses bamba s poignant odyssey doctrine the virtues he stood for and cultivated among his followers self esteem self reliance strong faith work ethic pursuit of excellence determination nonviolence and optimism in the face of adversity without the knowledge of the french colonial administration and many academics muslims beyond the arab world argues that this is the source of the resilience appeal and expansion of muridiyya which has fascinated observers since its inception in 1883 the euro in the 21st century clarifies the perception of the euro and empirically demonstrates that the euro has become a true common currency and the eurozone a true optimal currency area presenting in turn a model to imitate in order to demonstrate this this study analyzes the economic and monetary requirements and policies required to introduce a common currency as well as the theoretical underpinnings of both the european integration process and the historical economic monetary political and social circumstances that favoured the creation of the economic and monetary union furthermore this book sheds light on how the current economic and monetary circumstances are affecting the euro project through and analysis of three intertwined issues it studies how the economic chaos and financial uproar which has plagued the eurozone and world economy since 2008 has affected the single currency regime as well as the current image of the euro worldwide moreover it summarizes the lesson to be learnt from what can be considered the first euro crisis finally it thoroughly analyzes

the behaviour of the us federal reserve the european central bank and the international monetary fund during this crisis this book draws on and contributes to several bodies of literature within political economy economics and international relations and is particularly relevant at this time given that the current unfolding economic imbalances are causing some eurozone member states to rethink their economic and political views concerning the euro debates on the end of life controversy are complex because they seem to hijack national and cultural traditions where previous books have focused on ideological grounds the politics of intimacy explores dying as the site where policies are negotiated and implemented intimacy comprises the emotional experience of the end of life and how we acknowledge it or not through institutions this process shows that end of life controversy relies on the conflict between the individual and these institutions a relationship that is the cornerstone of western liberal democracies through interviews with mourners stakeholders and medical professionals examination of media debates in france and the czech republic durnová shows that liberal institutions in their attempts to accommodate the emotional experience at the end of life ultimately fail she describes this deadlock as the politics of intimacy revealing that political institutions deploy power through collective acknowledgment of individual emotions but fail to maintain this recognition because of this same experience the african economic outlook 2017 presents the continent s current state of affairs and forecasts its situation for the coming two years this report is an overview of the management of risk due to

livestock diseases a potentially catastrophic type of risk that can have strong external effects given its links to the food chain and to human health solvents and ionic liquids are ubiquitous within our whole life since ancient times and their effects are actually being studied through basic sciences like chemistry physics and biology as well as being researched by a large number of scientific disciplines this book represents an attempt to present examples on the utility of old and new solvents and the effects they exercise on several fields of academic and industrial interest the first section solvents presents information on bio solvents and their synthesis industrial production and applications about per and trichloroethylene air monitoring in dry cleaners in the city of sfax tunsia and on the synthesis of polyimides using molten benzoic acid as the solvent the second section ionic liquids shows information about the synthesis physicochemical characterization and exploration of antimicrobial activities of imidazolium ionic liquid supported schiff base and its transition metal complexes the technology of heterogenization of transition metal catalysts towards the synthetic applications in an ionic liquid matrix the progress in ionic liquids as reaction media monomers and additives in high performance polymers a pre screening of ionic liquids as gas hydrate inhibitor via application of cosmo rs for methane hydrate the extraction of aromatic compounds from their mixtures with alkanes from ternary to quaternary or higher systems and a review on ionic liquids as environmental benign solvent for cellulose chemistry the final section solvent effects displays interesting information on solvent effects on dye sensitizers derived from

anthocyanidins for applications in photocatalysis about the solvent effect on a model of snar reaction in conventional and non conventional solvents and on solvent effects in supramolecular systems as globalization processes and related neoliberal agendas promote privatization through state action people s struggles for rights to water have intensified in this context this book examines the role of the ambivalent state in local struggles for water which are deeply intertwined with global forums that support and or challenge the privatization of water resources these local global struggles have redefined the relationships between the state corporations and other social actors that impact the local politics of inequality and marginalization this book represents an integration of theory methods and examples using the s plus statistical modeling language and the s finmetrics module to facilitate the practice of financial econometrics it is the first book to show the power of s plus for the analysis of time series data it is written for researchers and practitioners in the finance industry academic researchers in economics and finance and advanced mba and graduate students in economics and finance readers are assumed to have a basic knowledge of s plus and a solid grounding in basic statistics and time series concepts this edition covers s finmetrics 2 0 and includes new chapters demonstrates how the success of universities depends on the working conditions of the younger academic generation young faculty are the future of academia yet without attractive career paths for young academics the future of the university is bleak featuring case studies from brazil china france germany india norway portugal russia

south africa and the united states young faculty in the twenty first century is the first book to analyze issues facing early career higher education faculty in an international context the contributors discuss how young academics are affected by contracts salaries the structure of careers and institutional conditions the analyses cover the full spectrum of the academic profession including part time jobs and short term contracts both in public and private institutions the book also addresses what universities must do in order to attract young qualified candidates this book presents work that has been conducted as part of the research project discourse on ethical questions of biomedicine of the interdisciplinary working group bioethics and science communication at the max delbrueck center for molecular medicine mdc in berlin buch germany this book offers ground breaking ideas on how the daily interworking of cutting edge biomedical research assess the broader social context and its communication to stakeholders and the public editors cover three aspects scientific ethical and legal and perception and communication this work establishes an international and interdisciplinary network of excellent researchers at the beginning of their careers who brilliantly integrate their work into the different perspectives on gene therapy from the natural and social sciences as well as the humanities and law discusses biological and cellular barriers limiting the clinical application of nonviral gene delivery systems addresses such questions as does patent granting hinder the development of gene therapy products offers insight in the future of public perception of gene therapy in europe provides details on how to communicate risks in

gene therapy with specific attention to irregular migrant workers that is to say those without legal permits to stay in the countries in which they work this volume focuses on domestic work presenting studies from ten european countries including belgium france germany greece ireland italy the netherlands and spain offering a comparative analysis of irregular migrants engaged in all kinds of domestic work the authors explore questions relating to employment conditions health issues and the family lives of migrants the book examines the living and working conditions of irregular migrant domestic workers their relations with employers their access to basic rights such as sick leave sick pay and holiday pay as well as access to health services close consideration is also given to the challenges for family life presented by workers status as irregular migrants with regard to their lives both in their countries of origin and with their employers through analyses of the often blurred distinction between legality and illegality the notion of a career in domestic work and the policy responses of european nations to the growth of irregular migrant domestic work this volume offers various conceptual developments in the study of migration and domestic work as such it will appeal to sociologists political scientists geographers and anthropologists with interests in migration gender the family and domestic work process engineering emerged at the beginning of the 20th century and has become an essential scientific discipline for the matter and energy processing industries its success is incontrovertible with the exponential increase in techniques and innovations rapid advances in new technologies such as

artificial intelligence as well as current societal needs sustainable development climate change renewable energy the environment are developments that must be taken into account in industrial renewal process engineering renewal 1 the first volume of three focuses on training demonstrating the need for innovation in order for the field to have a framework that is sustainable in a highly changeable world economic liberalization has been contested and defeated in france to an unparalleled extent in comparison to other leading political economies in western europe levy offers a historical explanation centered on the legacies of france s postwar statist or dirigiste economic model although this model was dismantled decades ago its policy party political and institutional legacies continue to fuel the contestation of liberalizing reforms today contested liberalization offers a comprehensive analysis of french economic and social policy since the 1980s including the macron administration it also traces the implications of the french case for contestation in east asia and latin america levy concludes by identifying ways that french liberalizers could diminish contestation notably by adopting a more inclusive process and more equitable allocation of the costs and benefits of liberalizing reform this book will interest scholars and students of political economy and comparative politics especially those working on economic liberalization french politics and the welfare state international military interventions endanger soldier and civilian lives can be financially costly and risk spiraling out of control one incident which exemplified the risks involved a us and uk wish to stop a russian ship from delivering helicopter gunships to the assad regime in syria in

2012 forcibly intercepting a Russian ship in transit could have risked World War III so they developed an alternative non-confrontational maneuver instead of military intervention. The UK persuaded the ship's insurer, London's Standard Club, to withdraw the ship's insurance. This loss of insurance caused the ship to return to Russia, thus avoiding an international clash as well as the delivery of deadly weapons to Syria. This use of legal maneuvering in lieu of armed force is known as lawfare and is becoming a critical tool in the foreign policy arena.

In *Lawfare*, author Orde Kittrie draws on his experiences as a lawfare practitioner, US State Department attorney, and international law scholar in analyzing the theory and practice of lawfare. Kittrie explains how factors including the increased reach of international laws and tribunals and the rise of economic globalization and information technology have fueled lawfare's increasing power and prevalence. The book includes case studies of recent offensive and defensive lawfare by the United States, China, all sides of the Israeli-Palestinian conflict, and several non-governmental organizations and individuals. Kittrie asserts that much of the United States' most effective and creative lawfare today is being waged by private sector or other non-governmental attorneys. He analyzes why this is the case and describes how such attorneys' expertise and experience can contribute even more to US national security. Kittrie also explains that lawfare deployed more systematically and adeptly by the US government could likely reduce US and foreign casualties and save US taxpayer dollars by supplementing or replacing the use of armed force as a tool for achieving some significant US

national security objectives understanding this alternative to armed force has never been more important volume 2 begins with an introduction and 4 chapters implementing software tools on cases of practical applications and it ends with a conclusion the various tools used in this volume operational research with a spreadsheet dashboards with spreadsheets and pivot tables scheduling and planning with a project manager the traffic simulation the conclusion shows the new features that are expected to emerge on spreadsheets as well as project managers developments and convergences between traffic simulators and new infrastructure that are emerging on road networks annex 1 focuses on the installation solver in microsoft excel and annex 2 focuses on the installation of the java development kit for centuries muslim countries and europe have engaged one another through theological dialogues diplomatic missions political rivalries and power struggles in the last thirty years due in large part to globalization and migration from islamic countries to the west what was previously an engagement across national and cultural boundaries has increasingly become an internalized encounter within europe itself questions of the hijab in schools freedom of expression in the wake of the danish cartoon crisis and the role of shari a have come to the forefront of contemporary european discourse the oxford handbook of european islam is the first collection to present a comprehensive approach to the multiple and changing ways islam has been studied across european countries parts one to three address the state of knowledge of islam and muslims within a selection of european countries while presenting a critical view of the most up to

date data specific to each country these chapters analyze the immigration cycles and policies related to the presence of muslims tackling issues such as discrimination post colonial identity adaptation and assimilation the thematic chapters in parts four and five examine secularism radicalization shari a hijab and islamophobia with the goal of synthesizing different national discussion into a more comparative theoretical framework the handbook attempts to balance cutting edge assessment with the knowledge that the content itself will eventually be superseded by events featuring eighteen newly commissioned essays by noted scholars in the field this volume will provide an excellent resource for students and scholars interested in european studies immigration islamic studies and the sociology of religion the fifa world cup is arguably the biggest sporting event on earth this book is the first to focus on the business and management of the world cup taking the reader from the initial stages of bidding and hosting decisions through planning and organisation to the eventual legacies of the competition the book introduces the global context in which the world cup takes place surveying the history and evolution of the tournament and the geopolitical background against which bidding and hosting decisions take place it examines all the key issues and debates which surround the tournament from governance and corruption to security and the media and looks closely at the technical processes that create the event from planning and finance to marketing and fan engagement analysis of the women s world cup is also embedded in every chapter and the book also considers the significance of world cup tournaments at age group level no

sport business or management course is complete without some discussion of the fifa world cup so this book is essential reading for any student researcher or sport business professional looking to fully understand global sport business today following the 2008 global financial crisis canada appeared to escape the austerity implemented elsewhere but this was spin hiding the reality a closer look reveals that the provinces responsible for delivering essential public and social services such as education and healthcare shouldered the burden the public sector in an age of austerity examines public sector austerity in the provinces and territories specifically addressing how austerity was implemented what forms austerity agendas took from regressive taxes and new user fees to public sector layoffs and privatization schemes and what if any political responses resulted contributors focus on the period from 2007 to 2015 the global financial crisis and the period of fiscal consolidation that followed while also providing a longer historical context austerity is not a new phenomenon a granular examination of each jurisdiction identifies how changing fiscal conditions have affected the delivery of public services and restructured public finances highlighting the consequences such changes have had for public sector workers and users of public services the first book of its kind in canada the public sector in an age of austerity challenges conventional wisdom by showing that canada did not escape post crisis austerity and that its recovery has been vastly overstated this handbook compares different political strategic and structural approaches to biosecurity in seven countries and five international and supra national

organizations it provides an overview of national and multilateral biodefense efforts by examining important policies in this field and through an inventory of the institutions and actors involved winner of an outstanding academic title award from choice magazine encyclopedia of environmental management gives a comprehensive overview of environmental problems their sources their assessment and their solutions through in depth entries and a topical table of contents readers will quickly find answers to questions about specific pollution and management issues edited by the esteemed sven erik jørgensen and an advisory board of renowned specialists this four volume set shares insights from more than 500 contributors all experts in their fields the encyclopedia provides basic knowledge for an integrated and ecologically sound management system nearly 400 alphabetical entries cover everything from air soil and water pollution to agriculture energy global pollution toxic substances and general pollution problems using a topical table of contents readers can also search for entries according to the type of problem and the methodology this allows readers to see the overall picture at a glance and find answers to the core questions what is the pollution problem and what are its sources what is the big picture or what background knowledge do we need how can we diagnose the problem both qualitatively and quantitatively using monitoring and ecological models indicators and services how can we solve the problem with environmental technology ecotechnology cleaner technology and environmental legislation how do we address the problem as part of an integrated management strategy this

accessible encyclopedia examines the entire spectrum of tools available for environmental management an indispensable resource it guides environmental managers to find the best possible solutions to the myriad pollution problems they face also available online this taylor francis encyclopedia is also available through online subscription offering a variety of extra benefits for researchers students and librarians including citation tracking and alerts active reference linking saved searches and marked lists html and pdf format options contact us to inquire about subscription options and print online combination packages us tel 1 888 318 2367 email e reference taylorandfrancis com international tel 44 0 20 7017 6062 email online sales tandf co uk

distribution systems drive energy and societal transition system planning enables investments to be made in the right place at the right time and with the right technology distribution system planning is centered on the evolution of planning methods that will best support this transition and describes the historical context and concepts that enable planning its challenges and key influencing factors to be grasped it also analyzes the impact of the development of renewable and decentralized energy resources government recommendations and distributor initiatives to promote their integration through the use of case studies this book provides examples of how planning methodologies have evolved as well as an overview of new and emerging solutions

a federal reserve insider pulls back the curtain on the secretive institution that controls america's economy after correctly predicting the housing crash of 2008 and quitting her high ranking wall street job danielle

dimartino booth was surprised to find herself recruited as an analyst at the federal reserve bank of dallas one of the regional centers of our complicated and widely misunderstood federal reserve system she was shocked to discover just how much tunnel vision arrogance liberal dogma and abuse of power drove the core policies of the fed dimartino booth found a cabal of unelected academics who made decisions without the slightest understanding of the real world just a slavish devotion to their theoretical models over the next nine years she and her boss richard fisher tried to speak up about the dangers of fed policies such as quantitative easing and deeply depressed interest rates but as she puts it in a world rendered unsafe by banks that were too big to fail we came to understand that the fed was simply too big to fight now dimartino booth explains what really happened to our economy after the fateful date of december 8 2008 when the federal open market committee approved a grand and unprecedented experiment lowering interest rates to zero and flooding america with easy money as she feared millions of individuals small businesses and major corporations made rational choices that didn't line up with the fed's wealth effect models the result eight years and counting of a sluggish recovery that barely feels like a recovery at all while easy money has kept wall street and the wealthy afloat and thriving main street isn't doing so well nearly half of men eighteen to thirty four live with their parents the highest level since the end of the great depression incomes are barely increasing for anyone not in the top ten percent of earners and for those approaching or already in retirement extremely low interest rates have

caused their savings to stagnate millions have been left vulnerable and afraid perhaps worst of all when the next financial crisis arrives the fed will have no tools left for managing the panic that ensues and then what dimartino booth pulls no punches in this exposé of the officials who run the fed and the toxic culture they created she blends her firsthand experiences with what she's learned from dozens of high powered market players reams of financial data and fed documents such as transcripts of fomc meetings whether you've been suspicious of the fed for decades or barely know anything about it as dimartino booth writes every american must understand this extraordinarily powerful institution and how it affects his or her everyday life and fight back this report examines how land is governed in france it describes the laws policies and practices that shape spatial and land use planning in the country as a whole and provides a detailed assessment of clermont ferrand and nantes saint nazaire war has returned to europe and nato stands at the forefront of the response to russia's aggression in ukraine but how does nato function how do nato member states perceive and act through the atlantic alliance and ultimately how do states shape nato's cohesion and relevance in the face of threats the nations of nato explores national policies within the atlantic alliance it examines the foreign policies of 16 allies focusing on issues such as their strategic cultures relationship with the united states contributions to nato operations levels of defence spending domestic challenges and decision making processes the recent crisis in ukraine has without doubt reinvigorated nato as a military alliance but over the last

decade it has also been affected by a number of challenges both endogenous and exogenous whether the alliance is threatened from the outside russia terrorism china or is being undermined from within intra alliance politics diverging threat perceptions has become an increasingly debated issue the degree to which the alliance can adapt to evolving threats has also been at stake at the heart of these debates are nato allies policies preferences threat perceptions and level of commitment to the shared enterprise by analysing the drivers constraints and specificities of relevant national policies the volume offers an overview of nato s contemporary functions and challenges and constitutes an important source of data for future research and comparative analysis this book provides the first comprehensive account of france s relationship to human protection since the 1980s by investigating the mutual impact interconnected yet distinct domestic and international norms of human protection have had on each other over time addresses the evolution of database management technologies and applications along with the progress and endeavors of new research areas p xiii this report examines past and existing individual learning accounts and other individual schemes to finance training based on a review of the existing literature as well as six new case studies commissioned by the oecd the upper austrian bildungskonto the french compte personnel de formation the scottish individual learning accounts individual training accounts the singapore skillsfuture credit the tuscan carta ila and the individual training accounts in michigan and washington in the united states this book

offers a basic introduction to genetic algorithms it provides a detailed explanation of genetic algorithm concepts and examines numerous genetic algorithm optimization problems in addition the book presents implementation of optimization problems using c and c++ as well as simulated solutions for genetic algorithm problems using matlab 7.0 it also includes application case studies on genetic algorithms in emerging fields the ramifications of the global financial crisis which erupted in 2007 continue to surprise not only the general public but also finance professionals economists and journalists faced with this challenge preparing for the next financial crisis goes back to basics the authors ask what do theory and empirical observations tell us about the causes and the consequences of financial crisis and instability in what has become an increasingly complex financial world what lessons can we learn from economic policies which have been implemented and research which has developed extremely rapidly in recent years so as not to repeat past mistakes in this comprehensive review of the literature which is both complete and balanced the authors highlight the points of consensus among economists and policymakers they assess the capacity of economic policies and institutions in limiting the cost of financial instability in conclusion they ask if the financial system has become safer in the light especially of the covid 19 global crisis ten years after the gfc crisis this is a timely review of the reform agenda the progress made and the areas where further changes need to be made to address new risks and challenges banking regulation and the private law governing the bank customer relationship came under the spotlight as

a result of the global financial crisis of 2007 2009 more than a decade later uk eu and international regulatory initiatives have transformed the structure business practices financing models and governance of the banking sector this authoritative text offers an in depth analysis of modern banking law and regulation while providing an assessment of its effectiveness and normative underpinnings its main focus is on uk law and practice but where necessary it delves into eu law and institutions such as the european banking union and supervisory role of the european central bank the book also covers the regulation of bank corporate governance and executive remuneration the promises and perils of fintech and regtech and the impact of brexit on uk financial services although detailed the text remains easy to read and reasonably short pedagogic features such as a glossary of terms and practice questions for each chapter are intended to facilitate learning it is a useful resource for students and scholars of banking law and regulation as well as for regulators and other professionals who are interested in reading a precise and evaluative account of this evolving area of law this book examines the unsatisfactory situation in the arab world where there is a pressing need to address poverty unemployment political instability corruption and the existential threat of climate change the authors analyze the relationships between universities and governments in the arab world and make recommendations that will help develop intellectual capacity and thereby aid the economic and social transitions so desperately needed in all arab countries countries aspiring to participate fully in the global knowledge economy require dynamic university sectors

operating in concert with governments that actively promote high quality education and research and foster innovation and entrepreneurship successful university government relationships can be complex and are continually evolving how to manage the cybersecurity of industrial systems is a crucial question to implement relevant solutions the industrial manager must have a clear understanding of it systems of communication networks and of control command systems they must also have some knowledge of the methods used by attackers of the standards and regulations involved and of the available security solutions cybersecurity of industrial systems presents these different subjects in order to give an in depth overview and to help the reader manage the cybersecurity of their installation the book addresses these issues for both classic scada architecture systems and industrial internet of things iiot systems
