engineers performance engineering enables shift left performance testing and shift right application performance monitoring oct 21 2021 the terms performance engineering and performance testing are often used interchangeably but performance testing is just one part of the discipline of performance engineering performance engineering is a broad holistic view of performance across the entire lifecycle of an application or program and consists of four apr 19 2018 while developers may traditionally think of performance engineering as hardware and software elements like throughput response time and overall utilization performance engineering is really just techniques used to ensure that the components of your network are achieving their intended mission nov 15 2022 performance engineering is a systematic approach for developing software applications to ensure they meet the expected performance objectives it is a discipline that is focused on the architectural design coding and implementation choices that engineers make including their technologies practices processes and frameworks oct 12 2022 performance engineering pe is a systematic approach for continuous application performance improvement gartner notes it involves practices techniques and activities in each devops phase to achieve your performance quality goals performance engineering the terms performance engineering and performance testing are often used interchangeably but performance testing is just one part of the discipline of performance engineering performance engineering is a broad holistic view of performance across the entire lifecycle of an the term performance engineering encompasses more than just the software and supporting infrastructure and as such the term performance engineering is preferable from a macro view adherence to the non functional requirements is also validated post deployment by monitoring the production systems performance engineering spe is a systematic and quantitative approach for the cost effective development of software systems to meet stringent non functional requirements performance capacity scalability
