every year roughly 100 000 fatal and injury crashes occur in the united states involving large trucks and buses the federal motor carrier safety administration fmcsa in the u s department of transportation works to reduce crashes injuries and fatalities involving large trucks and buses fmcsa uses information that is collected on the frequency of approximately 900 different violations of safety regulations discovered during mainly roadside inspections to assess motor carriers compliance with federal motor carrier safety regulations as well as to evaluate their compliance in comparison with their peers through use of this information fmcsa s safety measurement system sms identifies carriers to receive its available interventions in order to reduce the risk of crashes across all carriers improving motor carrier safety measurement examines the effectiveness of the use of the percentile ranks produced by sms for identifying high risk carriers and if not what alternatives might be preferred in addition this report evaluates the accuracy and sufficiency of the data used by sms to assess whether other approaches to identifying unsafe carriers would identify high risk carriers more effectively and to reflect on how members of the public use the sms and what effect making the sms information public has had on reducing crashes sas users in the health and life sciences industry need to create complex graphs to analyze biostatistics data and clinical data and they need to submit drugs for approval to the fda graphs used in the hls industry are complex in nature and require innovative usage of the graphics features clinical graphs using sas provides the knowledge the code and real world examples that enable you to create common clinical graphs using sas graphics tools such as the statistical graphics procedures and the graph template language this book describes detailed processes to create many commonly used graphs in the health and life sciences industry for sas 9 3 and sas 9 4 it covers many improvements in the graphics features that are supported by the statistical graphics procedures and the graph template language many of which are a direct result of the needs of the health and life sciences community with the addition of new features in sas 9 4 these graphs become positively easy to create topics covered include the usage of sgplot procedure the sgpanel procedure and the graph template language for the creation of graphs like forest plots swimmer plots and survival plots there are approximately 4 000 fatalities in crashes involving trucks and buses in the united states each year though estimates are wide ranging possibly 10 to 20 percent of these crashes might have involved fatigued drivers the stresses associated with their particular jobs irregular schedules etc and the lifestyle that many truck and bus drivers lead puts them at substantial risk for insufficient sleep and for developing short and long term health problems commercial motor vehicle driver fatigue long term health and highway safety assesses the state of knowledge about the relationship of such factors as hours of driving hours on duty and periods of rest to the fatigue experienced by truck and bus drivers while driving and the implications for the safe operation of their vehicles this report evaluates the relationship of these factors to drivers health over the longer term and identifies improvements in data and research methods that can lead to better understanding in both areas corporate social irresponsibility focuses on ethical failures in order to relate corporate responsibility to business ethics corporate governance and organization effectiveness the book advocates a strategic approach to csr ethical management cannot and should not be divorced from effective management corporate social responsibility has transitioned from oxymoron into a defining challenge of the twenty first century taking the recent financial crisis as a starting point alexander examines the underlying ethical and legal crises these events expose in the business world the problems that have come to light go beyond issues of firm financial performance into the integrity of the manufacturing and marketing processes and relations with consumers as such the book presents a model that resolves the apparent conflict between maximizing shareholder value and meeting the interests of other firm stakeholders alexander presents a balanced view contrasting her model with alternative approaches the book also covers the impact of globalization on management the ethics of outsourcing the limits of regulation as well as poverty alleviation and social entrepreneurship blending a comprehensive theoretical framework with a broad range of cases this book covers the latest major changes in us legislation as well as recent corporate scandals making it a valuable accompaniment to any course in csr business ethics or business government and society policymakers and the public are concerned about the road safety implications of legalizing marijuana despite the more than two decades of data since california became the first state to legalize marijuana for medical use there has been surprisingly little research on this question this study seeks to address this gap in the literature specifically this research combines twenty three years of state traffic data with information on the contemporaneous legal status of marijuana for both medical and recreational use to estimate two models of road safety first while treating both the state and the year as fixed effects the resulting panel regression model estimates that the legalization of medical or recreational marijuana is not a predictor of the number of fatalities per 100 000 vehicle miles traveled second due to limitations in the regression model a difference in difference analysis was conducted over the same period and found no relationship between legalization of medical marijuana and the number of fatalities per 100 000 vehicle miles traveled these findings suggest that concerns of policy makers and the public that legalizing marijuana will worsen road safety are not ungrounded at this time according to the models the recent upward trend of traffic fatality rates nationwide is not a result of medical marijuana legalization in fact the legalization of marijuana is not found to be a predictor of traffic fatalities includes national education association national commission on safety education reports critical analysis of driver education research 1957 p 129 186 and how experienced teachers develop good traffic citizens 1958 p 187 251 the report examines a draft plan prepared by the environmental protection agency that identifies critical security issues for drinking water and wastewater and outlines related research and technical support needs this report recommends increased attention to interagency coordination and encourages additional consideration of current restrictions on secure information dissemination it further suggests that epa incorporate the results of their research activities into an integrated water security guidance document to improve

support for water and wastewater utilities
