Basic Concepts of Algebraic Topology 1978-05-01 this text is intended as a one semester introduction to algebraic topology at the undergraduate and beginning graduate levels basically it covers simplicial homology theory the fundamental group covering spaces the higher homotopy groups and introductory singular homology theory the text follows a broad historical outline and uses the proofs of the discoverers of the important theorems when this is consistent with the elementary level of the course this method of presentation is intended to reduce the abstract nature of algebraic topology to a level that is palatable for the beginning student and to provide motivation and cohesion that are often lacking in abstract treatments the text emphasizes the geometric approach to algebraic topology and attempts to show the importance of topological concepts by applying them to problems of geometry and analysis the prerequisites for this course are calculus at the sophomore level a one semester introduction to the theory of groups a one semester introduction to point set topology and some familiarity with vector spaces outlines of the prerequisite material can be found in the appendices at the end of the text it is suggested that the reader not spend time initially working on the appendices but rather that he read from the beginning of the text referring to the appendices as his memory needs refreshing the text is designed for use by college juniors of normal intelligence and does not require mathematical maturity beyond the junior level

Algebraic Topology 2018 this textbook is intended for a course in algebraic topology at

the beginning graduate level the main topics covered are the classification of compact 2 manifolds the fundamental group covering spaces singular homology theory and singular cohomology theory these topics are developed systematically avoiding all unnecessary definitions terminology and technical machinery the text consists of material from the first five chapters of the author's earlier book algebraic topology an introduction gtm 56 together with almost all of his book singular homology theory gtm 70 the material from the two earlier books has been substantially revised corrected and brought up to date

Algebraic Topology 2013-12-01 to the teacher this book is designed to introduce a student to some of the important ideas of algebraic topology by emphasizing the relations of these ideas with other areas of mathematics rather than choosing one point of view of modern topology homotopy theory simplicial complexes singular theory axiomatic homology differential topology etc we concentrate our attention on concrete problems in low dimensions introducing only as much algebraic machinery as necessary for the problems we meet this makes it possible to see a wider variety of important features of the subject than is usual in a beginning text the book is designed for students of mathematics or science who are not aiming to become practicing algebraic topologists without we hope discouraging budding topologists we also feel that this approach is in better harmony with the historical development of the subject what would we like a student to know after a first course in topology assuming we reject the answer half of what one would like the student to know after a second course in topology our answers to this have guided the choice of material which includes understanding the relation between homology and integration first on plane domains later on riemann surfaces and in higher dimensions winding numbers and degrees of mappings fixed point theorems applications such as the jordan curve theorem invariance of domain in dices of vector fields and euler characteristics fundamental groups

A Basic Course in Algebraic Topology 2019-06-28 algebraic topology is an introductory textbook based on a class for advanced high school students at the stanford university mathematics camp sumac that the authors have taught for many years each chapter or lecture corresponds to one day of class at sumac the book begins with the preliminaries needed for the formal definition of a surface other topics covered in the book include the classification of surfaces group theory the fundamental group and homology this book assumes no background in abstract algebra or real analysis and the material from those subjects is presented as needed in the text this makes the book readable to undergraduates or high school students who do not have the background typically assumed in an algebraic topology book or class the book contains many examples and exercises allowing it to be used for both self study and for an introductory undergraduate topology course

Topology 1995 manifolds play an important role in topology geometry complex analysis algebra and classical mechanics learning manifolds differs from most other introductory mathematics in that the subject matter is often completely unfamiliar this introduction guides readers by explaining the roles manifolds play in diverse branches of

mathematics and physics the book begins with the basics of general topology and gently moves to manifolds the fundamental group and covering spaces

Elements Of Algebraic Topology 2018-03-05 elements of algebraic topology provides the most concrete approach to the subject with coverage of homology and cohomology theory universal coefficient theorems kunneth theorem duality in manifolds and applications to classical theorems of point set topology this book is perfect for communicating complex topics and the fun nature of algebraic topology for beginners

Introduction to Algebraic Topology 1969 this volume deals with the theory of finite topological spaces and its relationship with the homotopy and simple homotopy theory of polyhedra the interaction between their intrinsic combinatorial and topological structures makes finite spaces a useful tool for studying problems in topology algebra and geometry from a new perspective in particular the methods developed in this manuscript are used to study quillen s conjecture on the poset of p subgroups of a finite group and the andrews curtis conjecture on the 3 deformability of contractible two dimensional complexes this self contained work constitutes the first detailed exposition on the algebraic topology of finite spaces it is intended for topologists and combinatorialists but it is also recommended for advanced undergraduate students and graduate students with a modest knowledge of algebraic topology

Differential Forms in Algebraic Topology 2013-04-17 developed from a first year graduate course in algebraic topology this text is an informal introduction to some of the main ideas of contemporary homotopy and cohomology theory the materials are structured around four core areas de rham theory the cech de rham complex spectral sequences and characteristic classes by using the de rham theory of differential forms as a prototype of cohomology the machineries of algebraic topology are made easier to assimilate with its stress on concreteness motivation and readability this book is equally suitable for self study and as a one semester course in topology

Algebraic Topology 1996-01-01 based on lectures to advanced undergraduate and first year graduate students this is a thorough sophisticated and modern treatment of elementary algebraic topology essentially from a homotopy theoretic viewpoint author c r f maunder provides examples and exercises and notes and references at the end of each chapter trace the historical development of the subject

Basic Concepts of Algebraic Topology 2012-12-06 this text is intended as a one semester introduction to algebraic topology at the undergraduate and beginning graduate levels basically it covers simplicial homology theory the fundamental group covering spaces the higher homotopy groups and introductory singular homology theory the text follows a broad historical outline and uses the proofs of the discoverers of the important theorems when this is consistent with the elementary level of the course this method of presentation is intended to reduce the abstract nature of algebraic topology to a level that is palatable for the beginning student and to provide motivation and cohesion that are often lacking in abstract treatments the text emphasizes the geometric approach to algebraic topology and attempts to show the importance of topological concepts by applying them to problems of geometry and

analysis the prerequisites for this course are calculus at the sophomore level a one semester introduction to the theory of groups a one semester introduction to point set topology and some familiarity with vector spaces outlines of the prerequisite material can be found in the appendices at the end of the text it is suggested that the reader not spend time initially working on the appendices but rather that he read from the beginning of the text referring to the appendices as his memory needs refreshing the text is designed for use by college juniors of normal intelligence and does not require mathematical maturity beyond the junior level

Algebraic Topology from a Homotopical Viewpoint 2008-02-02 the authors present introductory material in algebraic topology from a novel point of view in using a homotopy theoretic approach this carefully written book can be read by any student who knows some topology providing a useful method to quickly learn this novel homotopy theoretic point of view of algebraic topology

Lecture Notes in Algebraic Topology 2001 the amount of algebraic topology a graduate student specializing in topology must learn can be intimidating moreover by their second year of graduate studies students must make the transition from understanding simple proofs line by line to understanding the overall structure of proofs of difficult theorems to help students make this transition the material in this book is presented in an increasingly sophisticated manner it is intended to bridge the gap between algebraic and geometric topology both by providing the algebraic tools that a geometric topologist needs and by concentrating on those areas of algebraic topology that are geometrically motivated prerequisites for using this book include basic set theoretic topology the definition of CW complexes some knowledge of the fundamental group covering space theory and the construction of singular homology most of this material is briefly reviewed at the beginning of the book the topics discussed by the authors include typical material for first and second year graduate courses the core of the exposition consists of chapters on homotopy groups and on spectral sequences there is also material that would interest students of geometric topology homology with local coefficients and obstruction theory and algebraic topology spectra and generalized homology as well as preparation for more advanced topics such as algebraic K theory and the S-cobordism theorem a unique feature of the book is the inclusion at the end of each chapter of several projects that require students to present proofs of substantial theorems and to write notes accompanying their explanations working on these projects allows students to grapple with the big picture teaches them how to give mathematical lectures and prepares them for participating in research seminars the book is designed as a textbook for graduate students studying algebraic and geometric topology and homotopy theory it will also be useful for students from other fields such as differential geometry algebraic geometry and homological algebra the exposition in the text is clear special cases are presented over complex general statements

A Concise Course in Algebraic Topology 1999-09 algebraic topology is a basic part of modern mathematics and some knowledge of this area is indispensable for any advanced work relating to geometry including topology itself differential geometry

algebraic geometry and lie groups this book provides a detailed treatment of algebraic topology both for teachers of the subject and for advanced graduate students in mathematics either specializing in this area or continuing on to other fields j peter may s approach reflects the enormous internal developments within algebraic topology over the past several decades most of which are largely unknown to mathematicians in other fields but he also retains the classical presentations of various topics where appropriate most chapters end with problems that further explore and refine the concepts presented the final four chapters provide sketches of substantial areas of algebraic topology that are normally omitted from introductory texts and the book concludes with a list of suggested readings for those interested in delving further into the field

Algebraic Topology: A Structural Introduction 2021-12-24 algebraic topology is a system and strategy of partial translations aiming to reduce difficult topological problems to algebraic facts that can be more easily solved the main subject of this book is singular homology the simplest of these translations studying this theory and its applications we also investigate its underlying structural layout the topics of homological algebra homotopy theory and category theory which occur in its foundation this book is an introduction to a complex domain with references to its advanced parts and ramifications it is written with a moderate amount of prerequisites basic general topology and little else and a moderate progression starting from a very elementary beginning a consistent part of the exposition is organised in the form of exercises with suitable hints and solutions it can be used as a textbook for a semester course or self study and a guidebook for further study

Combinatorial Algebraic Topology 2008-01-08 this volume is the first comprehensive treatment of combinatorial algebraic topology in book form the first part of the book constitutes a swift walk through the main tools of algebraic topology readers graduate students and working mathematicians alike will probably find particularly useful the second part which contains an in depth discussion of the major research techniques of combinatorial algebraic topology although applications are sprinkled throughout the second part they are principal focus of the third part which is entirely devoted to developing the topological structure theory for graph homomorphisms

Algebraic Topology: An Intuitive Approach 1999 the single most difficult thing one faces when one begins to learn a new branch of mathematics is to get a feel for the mathematical sense of the subject the purpose of this book is to help the aspiring reader acquire this essential common sense about algebraic topology in a short period of time to this end sato leads the reader through simple but meaningful examples in concrete terms moreover results are not discussed in their greatest possible generality but in terms of the simplest and most essential cases in response to suggestions from readers of the original edition of this book sato has added an appendix of useful definitions and results on sets general topology groups and such he has also provided references topics covered include fundamental notions such as homeomorphisms homotopy equivalence fundamental groups and higher homotopy groups homology and cohomology fiber bundles spectral sequences and characteristic classes objects and

examples considered in the text include the torus the möbius strip the klein bottle closed surfaces cell complexes and vector bundles

More Concise Algebraic Topology 2012-02 with firm foundations dating only from the 1950s algebraic topology is a relatively young area of mathematics there are very few textbooks that treat fundamental topics beyond a first course and many topics now essential to the field are not treated in any textbook j peter may s a concise course in algebraic topology addresses the standard first course material such as fundamental groups covering spaces the basics of homotopy theory and homology and cohomology in this sequel may and his coauthor kathleen ponto cover topics that are essential for algebraic topologists and others interested in algebraic topology but that are not treated in standard texts they focus on the localization and completion of topological spaces model categories and hopf algebras the first half of the book sets out the basic theory of localization and completion of nilpotent spaces using the most elementary treatment the authors know of it makes no use of simplicial techniques or model categories and it provides full details of other necessary preliminaries with these topics as motivation most of the second half of the book sets out the theory of model categories which is the central organizing framework for homotopical algebra in general examples from topology and homological algebra are treated in parallel a short last part develops the basic theory of bialgebras and hopf algebras

Basic Algebraic Topology 2016-02-03 building on rudimentary knowledge of real analysis point set topology and basic algebra basic algebraic topology provides plenty of material for a two semester course in algebraic topology the book first introduces the necessary fundamental concepts such as relative homotopy fibrations and cofibrations category theory cell complexes and si

Algebraic Topology 2012-12-06 this book surveys the fundamental ideas of algebraic topology the first part covers the fundamental group its definition and application in the study of covering spaces the second part turns to homology theory including cohomology cup products cohomology operations and topological manifolds the final part is devoted to homotopy theory including basic facts about homotopy groups and applications to obstruction theory

Algebraic Topology 2021-07-25 this work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it this work is in the public domain in the united states of america and possibly other nations within the united states you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public to ensure a quality reading experience this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy to read typeface we appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

Introduction to Topological Manifolds 2006-04-06 algebraic topology and basic

homotopy theory form a fundamental building block for much of modern mathematics these lecture notes represent a culmination of many years of leading a two semester course in this subject at mit the style is engaging and student friendly but precise every lecture is accompanied by exercises it begins slowly in order to gather up students with a variety of backgrounds but gains pace as the course progresses and by the end the student has a command of all the basic techniques of classical homotopy theory

Topology and Geometry 2013-03-09 this book offers an introductory course in algebraic topology starting with general topology it discusses differentiable manifolds cohomology products and duality the fundamental group homology theory and homotopy theory from the reviews an interesting and original graduate text in topology and geometry a good lecturer can use this text to create a fine course a beginning graduate student can use this text to learn a great deal of mathematics mathematical reviews

Algebraic Topology 2018-03-05 great first book on algebraic topology introduces cohomology through singular theory

An Introduction to Algebraic Topology 2007-02-27 originally published homology theory on algebraic varieties new york pergamon press 1957

An Introduction to Algebraic Topology 2021-09-09 comprehensive coverage of elementary general topology as well as algebraic topology specifically 2 manifolds covering spaces and fundamental groups problems with selected solutions bibliography 1975 edition

Algebraic Topology 2008 this book is written as a textbook on algebraic topology the first part covers the material for two introductory courses about homotopy and homology the second part presents more advanced applications and concepts duality characteristic classes homotopy groups of spheres bordism the author recommends starting an introductory course with homotopy theory for this purpose classical results are presented with new elementary proofs alternatively one could start more traditionally with singular and axiomatic homology additional chapters are devoted to the geometry of manifolds cell complexes and fibre bundles a special feature is the rich supply of nearly 500 exercises and problems several sections include topics which have not appeared before in textbooks as well as simplified proofs for some important results prerequisites are standard point set topology as recalled in the first chapter elementary algebraic notions modules tensor product and some terminology from category theory the aim of the book is to introduce advanced undergraduate and graduate master s students to basic tools concepts and results of algebraic topology sufficient background material from geometry and algebra is included

Homology Theory 2012-12-06 this introduction to some basic ideas in algebraic topology is devoted to the foundations and applications of homology theory after the essentials of singular homology and some important applications are given successive topics covered include attaching spaces finite cw complexes cohomology products manifolds poincare duality and fixed point theory this second edition includes a chapter on covering spaces and many new exercises

Algebraic Topology - Homotopy and Homology 2017-12-01 from the reviews the author has attempted an ambitious and most commendable project the book contains much material that has not previously appeared in this format the writing is clean and clear and the exposition is well motivated this book is all in all a very admirable work and a valuable addition to the literature mathematical reviews

Lectures on Algebraic Topology 2012-12-06 this is essentially a book on singular homology and cohomology with special emphasis on products and manifolds it does not treat homotopy theory except for some basic notions some examples and some applications of cohomology to homotopy nor does it deal with generalised homology but many formulations and arguments on singular homology are so chosen that they also apply to general homology because of these absences i have also omitted spectral sequences their main applications in topology being to homotopy and general cohomology theory cech cohomology is treated in a simple ad hoc fashion for locally compact subsets of manifolds a short systematic treatment for arbitrary spaces emphasizing the universal property of the cech procedure is contained in an appendix the book grew out of a one year s course on algebraic topology and it can serve as a text for such a course for a shorter basic course say of half a year one might use chapters ii iii iv 1 4 v 1 5 7 8 vi 3 7 9 11 12 as prerequisites the student should know the elementary parts of general topology abelian group theory and the language of categories although our chapter i provides a little help with the latter two for pedagogical reasons i have treated integral homology only up to chapter vi if a reader or teacher prefers to have general coefficients from the beginning he needs to make only minor adaptations

A1-Algebraic Topology over a Field 2012-07-13 this text deals with a_1 homotopy theory over a base field i e with the natural homotopy theory associated to the category of smooth varieties over a field in which the affine line is imposed to be contractible it is a natural sequel to the foundational paper on a_1 homotopy theory written together with v voevodsky inspired by classical results in algebraic topology we present new techniques new results and applications related to the properties and computations of a_1 homotopy sheaves a_1 homology sheaves and sheaves with generalized transfers as well as to algebraic vector bundles over affine smooth varieties

A User's Guide to Algebraic Topology 1997-01-31 this book arose from courses taught by the authors and is designed for both instructional and reference use during and after a first course in algebraic topology it is a handbook for users who want to calculate but whose main interests are in applications using the current literature rather than in developing the theory typical areas of applications are differential geometry and theoretical physics we start gently with numerous pictures to illustrate the fundamental ideas and constructions in homotopy theory that are needed in later chapters we show how to calculate homotopy groups homology groups and cohomology rings of most of the major theories exact homotopy sequences of fibrations some important spectral sequences and all the obstructions that we can compute from these our approach is to mix illustrative examples with those proofs that actually develop transferable

calculational aids we give extensive appendices with notes on background material extensive tables of data and a thorough index audience graduate students and professionals in mathematics and physics

A First Course in Algebraic Topology 1980-09-25

Introduction to Algebraic Topology 2022-06-20 this textbook provides a succinct introduction to algebraic topology it follows a modern categorical approach from the beginning and gives ample motivation throughout so that students will find this an ideal first encounter to the field topics are treated in a self contained manner making this a convenient resource for instructors searching for a comprehensive overview of the area it begins with an outline of category theory establishing the concepts of functors natural transformations adjunction limits and colimits as a first application van kampen's theorem is proven in the groupoid version following this an excursion to cofibrations and homotopy pushouts yields an alternative formulation of the theorem that puts the computation of fundamental groups of attaching spaces on firm ground simplicial homology is then defined motivating the eilenberg steenrod axioms and the simplicial approximation theorem is proven after verifying the axioms for singular homology various versions of the mayer vietoris sequence are derived and it is shown that homotopy classes of self maps of spheres are classified by degree the final chapter discusses cellular homology of cw complexes culminating in the uniqueness theorem for ordinary homology introduction to algebraic topology is suitable for a single semester graduate course on algebraic topology it can also be used for self study with numerous examples exercises and motivating remarks included

Basic Algebraic Topology 2013-10-23

Lectures On Algebraic Topology 2021-09-20 this self contained introduction to algebraic topology is suitable for a number of topology courses it consists of about one quarter general topology without its usual pathologies and three quarters algebraic topology centred around the fundamental group a readily grasped topic which gives a good idea of what algebraic topology is the book has emerged from courses given at the university of newcastle upon tyne to senior undergraduates and beginning postgraduates it has been written at a level which will enable the reader to use it for self study as well as a course book the approach is leisurely and a geometric flavour is evident throughout the many illustrations and over 350 exercises will prove invaluable as a teaching aid this account will be welcomed by advanced students of pure mathematics at colleges and universities

Algebraic Topology 2007-01-01 surveys several algebraic invariants including the fundamental group singular and cech homology groups and a variety of cohomology groups

An Introduction to Algebraic Topology 1998-07-22 a clear exposition with exercises of the basic ideas of algebraic topology suitable for a two semester course at the beginning graduate level it assumes a knowledge of point set topology and basic algebra although categories and functors are introduced early in the text excessive generality is avoided and the author explains the geometric or analytic origins of

abstract concepts as they are introduced

Algebraic Topology 2002 in most mathematics departments at major universities one of the three or four basic first year graduate courses is in the subject of algebraic topology this introductory textbook in algebraic topology is suitable for use in a course or for self study featuring broad coverage of the subject and a readable exposition with many examples and exercises the four main chapters present the basic material of the subject fundamental group and covering spaces homology and cohomology higher homotopy groups and homotopy theory generally the author emphasizes the geometric aspects of the subject which helps students gain intuition a unique feature of the book is the inclusion of many optional topics which are not usually part of a first course due to time constraints and for which elementary expositions are sometimes hard to find among these are bockstein and transfer homomorphisms direct and inverse limits h spaces and hopf algebras the brown representability theorem the james reduced product the dold thom theorem and a full exposition of steenrod squares and powers researchers will also welcome this aspect of the book

Algebraic Topology of Finite Topological Spaces and Applications 2011-08-24 building on rudimentary knowledge of real analysis point set topology and basic algebra basic algebraic topology provides plenty of material for a two semester course in algebraic topology the book first introduces the necessary fundamental concepts such as relative homotopy fibrations and cofibrations category theory cell complexes and simplicial complexes it then focuses on the fundamental group covering spaces and elementary aspects of homology theory it presents the central objects of study in topology visualization manifolds after developing the homology theory with coefficients homology of the products and cohomology algebra the book returns to the study of manifolds discussing poincaré duality and the de rham theorem a brief introduction to cohomology of sheaves and Čech cohomology follows the core of the text covers higher homotopy groups hurewicz s isomorphism theorem obstruction theory eilenberg mac lane spaces and moore postnikov decomposition the author then relates the homology of the total space of a fibration to that of the base and the fiber with applications to characteristic classes and vector bundles the book concludes with the basic theory of spectral sequences and several applications including serre s seminal work on higher homotopy groups thoroughly classroom tested this self contained text takes students all the way to becoming algebraic topologists historical remarks throughout the text make the subject more meaningful to students also suitable for researchers the book provides references for further reading presents full proofs of all results and includes numerous exercises of varying levels

Fundamentals of Algebraic Topology 2014-10-31 this rapid and concise presentation of the essential ideas and results of algebraic topology follows the axiomatic foundations pioneered by eilenberg and steenrod the approach of the book is pragmatic while most proofs are given those that are particularly long or technical are omitted and results are stated in a form that emphasizes practical use over maximal generality moreover to better reveal the logical structure of the subject the separate roles of algebra and

topology are illuminated assuming a background in point set topology fundamentals of algebraic topology covers the canon of a first year graduate course in algebraic topology the fundamental group and covering spaces homology and cohomology cw complexes and manifolds and a short introduction to homotopy theory readers wishing to deepen their knowledge of algebraic topology beyond the fundamentals are guided by a short but carefully annotated bibliography
