**Chiropractic Standards of Practice and Utilization Guidelines in the Care and Treatment of Injured Workers** 1988 there is consistent evidence that chiropractors have high utilization of radiography for patients with acute low back pain this is contrary to evidence based guidelines which suggest that radiography is of limited value in this patient population radiography should be considered only in patients with red flags which are signs and symptoms suggestive of

underlying serious disease the purpose of this thesis is to investigate the apparent disparity between evidence and practice among chiropractors the thesis consists of three research studies the primary research study investigates how well chiropractic teaching clinics adhere to clinical guidelines for radiography use for a new episode of low back pain and whether the high use of radiography seen in practice begins during undergraduate training the second study investigates radiography instruction among chiropractic schools world wide and the third study describes trends in use of lumbar and full spine radiography among ontario chiropractors over a seven year period in the primary study radiography use was assessed among 448 patients presenting to the teaching clinics of a canadian chiropractic school with a new episode of low back pain this was compared to the radiography recommendations of three clinical guidelines each guideline recommends against the use of radiography in the absence of red flags for serious disease a total of 12 3 per cent of eligible patients were recommended for radiography the red flag rate among patients ranged from 45 3 to 70 5 per cent depending on the guideline used among patients without red flags for serious disease 89 4 93 3 and 94 7 per cent were not recommended for radiography based on the criteria of three selected guidelines respectively results of the second and third studies suggest a general adherence to current evidence for radiography use in low back pain among chiropractic schools world wide and a decreasing trend in the use of lumbar and full spine radiography by ontario chiropractors the results suggest a high level of adherence to guidelines among the chiropractic teaching clinics for the use of radiography in a new episode of low back pain only a minority of patients were recommended for radiography this is in contrast to previous studies of community chiropractors

*A Synopsis of the Guidelines for Chiropractic Quality Assurance and Practice Parameters* 1993

**Chiropractic Practice Guidelines** 2021-07-16 chiropractic is by far the most common form of alternative medicine in the united states today but its fascinating origins stretch back to the battles between science and religion in the nineteenth century at the center of the story are chiropractic s colorful founders d d palmer and his son b j palmer of davenport iowa where in 1897 they established the palmer college of chiropractic holly folk shows how the palmers system depicted chiropractic as a conduit for both material and spiritualized versions of a vital principle reflecting popular contemporary therapies and nineteenth century metaphysical beliefs including the idea that the spine was home to occult forces the creation of chiropractic and other progressive era versions of alternative medicine happened at a time when the relationship between science and religion took on an urgent increasingly competitive tinge many remarkable people including the palmers undertook highly personal reinterpretations of their physical and spiritual worlds in this context folk reframes alternative medicine and spirituality as a type of populist intellectual culture in which ideologies about the body comprise a highly appealing form of cultural resistance
