multiple design situations and systematic steps combine to produce successful designs the author developed the tutorials by combining his own industry experience with the knowledge of engineers department managers professors vendors and manufacturers he is directly involved with solidworks every day and his responsibilities go far beyond the creation of just a 3d model from the bestselling author of team of teams and my share of the task an entirely new way to understand risk and master the unknown retired four star general stan mcchrystal has lived a life associated with the deadly risks of combat from his first day at west point to his years in afghanistan to his efforts helping business leaders navigate a global pandemic mcchrystal has seen how individuals and organizations fail to mitigate risk why because they focus on the probability of something happening instead of the interface by which it can be managed in this new book general mcchrystal offers a battle tested system for detecting and responding to risk instead of defining risk as a force to predict mcchrystal and coauthor anna butrico show that there are in fact ten dimensions of control we can adjust at any given time by closely monitoring these controls we can maintain a healthy risk immune system that allows us to effectively anticipate identify analyze and act upon the ever present possibility that things will not go as planned drawing on examples ranging from military history to the business

world and offering practical exercises to improve preparedness mcchrystal illustrates how these ten factors are always in effect and how by considering them individuals and organizations can exert mastery over every conceivable sort of risk that they might face we may not be able to see the future but with mcchrystal s hard won guidance we can improve our resistance and build a strong defense against what we know and what we don t
