eighteen essays that provide a decisive input to the study of logic and argumentation theory by some of the finest specialists in these areas covering the main schools of thought and contemporary trends at the beginning of the 21st century in these essays the authors clarify the status of what we currently call ambiguously and problematically logic and argumentation theory and discuss the no less controversial issue of the relationship between these two concepts when applied to the study of argumentation and its problems at the same time they take stock of the most recent developments of argumentation theory considered as an ongoing research subject it is the first time in the last few decades that a work this comprehensive and up to date on such matters has been published this volume is an essential tool for all of those interested in the study of the relations between logic and argumentation particularly at the university level it provides not only an introduction to these subjects but also the necessary framework for further specialised research development in the future in this book the authors address some basic problems in the learning of biomedical science medicine and the other health sciences students in most medical schools especially in basic science courses are required to memorize a large number of facts facts which may or may not be relevant to medical practice problem based learning has two fundamental postulates the learning through problem solving is much more effective for creating a body of knowledge usable in the future and that physician skills most important for patients are problem solving skills rather than memory skills this book presents the scientific basis of problem based learning and goes on to describe the approaches to problem based medical learning that have been developed over the years at mcmaster university largely by barrows and tamblyn to understand the mind we need to draw equally on the fields of cognitive science and neuroscience but these two fields have very separate intellectual roots and very different styles so how can these two be reconciled in order to develop a full understanding of the mind and brain this is the focus of this landmark new book this title provides a comprehensive overview of european migration law more than three dozen directives and regulations are discussed throughout this volume provides a multidisciplinary and even interdisciplinary outlook on the current state of affairs in argumentation theory some of the contributions in pondering on problems of argumentation deal with problems of argumentation that have been recognized as theoretical issues for a considerable time like the problems of fallaciousness and identifying argumentation structures other contributions discuss issues that have become a focus of attention only recently or regained their prominence such as the relationship between dialectic and rhetoric and the strategic use of the argumentative technique of dissociation in five separate sections papers are included dealing with argumentative strategies problems of norms of reasonableness and fallaciousness types of argument and argument schemes the structure of argumentation and rules for advocacy and discussion the american association for the advancement of science s report on vision and change in undergraduate biology education suggests that instructors can no longer rely solely on trying to cover a syllabus packed with topics but rather should introduce fewer concepts but present them in greater depth they further suggest that the principles embodied in a set of core concepts and competencies should be the basis for all undergraduate biology courses including those designed for nonmajors the theme of tools for critical thinking in biology will be the first and most fundamental of these competencies the ability to apply the process of science biology courses and curricula must engage students in how scientific inquiry is conducted including evaluating and interpreting scientific explanations of the natural world the book uses diverse examples to illustrate how experiments work how hypotheses can be tested by systematic and comparative observations when experiments aren t possible how models are useful in science and how sound decisions can be based on the weight of evidence even when uncertainty remains these are fundamental issues in the process of science that are important for everyone to understand whether they pursue careers in science or not where other introductory biology textbooks are organized by scientific concepts tools for critical thinking in biology will instead show how methods can be used to test hypotheses in fields as different as ecology and medicine using contemporary case studies the book will provide students with a deeper understanding of the strengths and weaknesses of such methods for answering new questions and will thereby change the way they think about the fundamentals of biology brunacini makes the observation that fire departments more closely resemble cults or severely dysfunctional families than a regular workforce he brings the melting point and density through genetic toxicity studies to mammalian toxicology and studies to investigate effects on the environment this book describes clearly the process of obtaining approval for use in a variety of global regions and across different applications it also explains why different tests are performed and the implications of the results political and scientific debates on migration policies have mostly focused on governments efforts to control or reduce low skilled asylum and irregular migration or to encourage the return migration of these categories less research and constructive discourse has been conducted on the role and effectiveness of policies to attract or retain high skilled workers an improved understanding of the drivers and dynamics of high skilled migration is essential for effective policy making as most highly developed and emerging economies experience growing shortages of high skilled labour supply in certain occupations and sectors and skilled immigration is often viewed as one way of addressing these simplistic assumptions that high skilled migrants are primarily in pursuit of higher wages raise the expectation that policies which open channels for high skilled immigration are generally successful although many countries have introduced policies aimed at attracting and facilitating the recruitment of high skilled workers not all recruitment efforts have had the desired effects and anecdotal evidence on the effectiveness of these programmes is rather mixed the reason is that the rather narrow focus on migration policy coincides with a lack of systematic and rigorous consideration of other economic social and political drivers of migration which may be equally or sometimes even more important than migration policies per se a better understanding of migration policies their making consequences and limitations requires a systematic knowledge of the broader economic social and political structures and their interaction in both origin and destination countries this book enhances this vibrant field of social
