this handbook brings together leading international scholars to study the diverse figures movements and approaches that constitute presocratic philosophy the study presents interpretations and evaluations of the presocratics accomplishments from thales to the sophists and from theology to science a stanford university press classic this volume offers detailed accounts of current research in grammatical number in language following a detailed introduction the chapters in the first three parts of the book explore the multiple

research questions in the field and the complex problems surrounding the analysis of grammatical number part i presents the background and foundational notions part ii the morphological semantic and syntactic aspects and part iii the different means of expressing plurality in the event domain the final part offers fifteen case studies that include in depth discussion of grammatical number phenomena in a range of typologically diverse languages written by or in collaboration with native speakers linguists or based on extensive fieldwork the volume draws on work from a range of subdisciplines including morphology syntax semantics and psycholinguistics and will be a valuable resource for students and scholars in all areas of theoretical descriptive and experimental linguistics in this bracing and original book geoffrey galt harpham argues that today s humanities are an invention of the american academy in the years following world war ii when they were first conceived as an expression of american culture and an instrument of american national interests the humanities portray a dream of america in two senses they represent an aspiration of americans since the first days of the republic for a state so secure and prosperous that people could enjoy and appreciate culture for its own sake and they embody in academic terms an idealized conception of the american national character although they are struggling to retain their status in america the concept of the humanities has spread to other parts of the world and remains one of america s most distinctive and valuable contributions to higher education the humanities and the dream of america explores a number of linked problems that have emerged in recent years the role at once inspiring and disturbing played by philology in the formation of the humanities the reasons for the humanities perpetual state of crisis the shaping role of philanthropy in the humanities and the new possibilities for literary study offered by the

subject of pleasure framed by essays that draw on Harpham's pedagogical experiences abroad and as a lecturer at the U.S. Air Force Academy as well as his vantage as director of the National Humanities Center. This book provides an essential perspective on the history, ideology, and future of this important topic from land management to water rights. This volume looks at the current status of common property resources or CPRs in South Asia. Developed countries have managed to establish well-defined property rights over numerous resources, and in some instances extended non-exclusionary rights over privately owned resources over an extended period of time in the developing world. However, the share of community property is extensive either as a response to an expanding market or because the exposure to markets is still in its nascent stage. This coupled with the demands of globalization has led to the co-existence of both community ownership of resources as well as an evolving private property rights market. This tension between public versus private ownership rights is particularly relevant in the developing countries of South Asia not only because of its shared history but also because of its resources frequently cross national boundaries. This book tells the story of CPRs and the commons in a rapidly changing South Asia, including contributions from those working with natural resources in Bhutan, India, Nepal, Pakistan, and Sri Lanka. The papers discuss issues such as equity in distribution, efficiency and productivity of resources, sustainability of resources, and institutional transition and governance. A wide-ranging history of the intellectual developments that produced the modern idea of the algorithm, bringing together the histories of mathematics, computer science, and linguistic thought, language, and the rise of the algorithm reveals how recent developments in artificial intelligence are reopening an issue that troubled mathematicians long before the computer age. How do you draw the line between computational rules and the complexities of making systems comprehensible to people? Here Jeffrey M. Binder offers a compelling tour of four visions of universal computation that addressed this issue in very different ways: G. W. Leibniz's calculus ratiocinator, a universal algebra scheme, Nicolas de Condorcet designed during the French

revolution, George Boole's nineteenth-century logic system, and the early programming language ALGOL, whose name is short for algorithmic language. These episodes show that symbolic computation has repeatedly become entangled in debates about the nature of communication to what extent can meaning be controlled by individuals like the values of a and b in algebra, and to what extent is meaning inevitably social. By attending to this long-neglected question, we come to see that the modern idea of the algorithm is implicated in a long history of attempts to maintain a disciplinary boundary separating technical knowledge from the languages people speak day to day. Machine learning in its increasing dependence on words now places this boundary in jeopardy, making its stakes all the more urgent. To understand the idea of the algorithm is a levee holding back the social complexity of language, and it is about to break. This book is about the flood that inspired its construction. This handbook offers a comprehensive overview of the field of Persian linguistics, discusses its development, and captures critical accounts of cutting-edge research within its major subfields, as well as outlining current debates and suggesting productive lines of future research. Leading scholars in the major subfields of Persian linguistics examine a range of topics split into six thematic parts following a detailed introduction from the editors. The volume begins by placing Persian in its historical and typological context. In part I, chapters in part II examine topics relating to phonetics and phonology, while part III looks at approaches to and features of Persian syntax. The fourth part of the volume explores morphology and lexicography, as well as the work of the Academy of Persian Language and Literature. Part V, language and people, covers topics such as language contact and teaching Persian as a foreign language, while the final part examines psycho-neuro and computational linguistics. The volume will be an essential resource for all scholars with an interest in Persian language and linguistics. In this book, Livingston develops the political implications of formal results obtained over the course of the twentieth century in set theory, metalogic, and computational theory. He argues that the results

achieved by thinkers such as cantor russell godel turing and cohen even when they suggest inherent paradoxes and limitations to the structuring capacities of language or symbolic thought have far reaching implications for understanding the nature of political communities and their development and transformation alain badiou s analysis of logical mathematical structures forms the backbone of his comprehensive and provocative theory of ontology politics and the possibilities of radical change through interpretive readings of badiou s work as well as the texts of giorgio agamben jacques lacan jacques derrida gilles deleuze and ludwig wittgenstein livingston develops a formally based taxonomy of critical positions on the nature and structure of political communities these readings along with readings of parmenides and plato show how the formal results can transfigure two interrelated and ancient problems of the one and the many the problem of the relationship of a form or idea to the many of its participants and the problem of the relationship of a social whole to its many constituents the teaching archive shows us a series of major literary thinkers in a place we seldom remember them inhabiting the classroom rachel sagner buurma and laura heffernan open up the teaching archive the syllabuses course descriptions lecture notes and class assignments of critics and scholars including t s eliot caroline spurgeon i a richards edith rickert j saunders redding edmund wilson cleanth brooks josephine miles and simon j ortiz this new history of english rewrites what we know about the discipline by showing how students helped write foundational works of literary criticism and how english classes at community colleges and hbcus pioneered the reading methods and expanded canons that came only belatedly to the ivy league it reminds us that research and teaching which institutions often imagine as separate have always been intertwined in practice in a contemporary moment of humanities defunding the casualization of teaching and the privatization of pedagogy the teaching archive offers a more accurate view of the work we have done in the past and must continue to do in the future artificial intelligence has always inspired outlandish visions that ai is going to destroy us save us or at the very least radically transform

us erik larson exposes the vast gap between the actual science underlying ai and the dramatic claims being made for it this is a timely important and even essential book john horgan author of the end of science many futurists insist that ai will soon achieve human levels of intelligence from there it will quickly eclipse the most gifted human mind the myth of artificial intelligence argues that such claims are just that myths we are not on the path to developing truly intelligent machines we don t even know where that path might be erik larson charts a journey through the landscape of ai from alan turing s early work to today s dominant models of machine learning since the beginning ai researchers and enthusiasts have equated the reasoning approaches of ai with those of human intelligence but this is a profound mistake even cutting edge ai looks nothing like human intelligence modern ai is based on inductive reasoning computers make statistical correlations to determine which answer is likely to be right allowing software to say detect a particular face in an image but human reasoning is entirely different humans do not correlate data sets we make conjectures sensitive to context the best guess given our observations and what we already know about the world we haven t a clue how to program this kind of reasoning known as abduction yet it is the heart of common sense larson argues that all this ai hype is bad science and bad for science a culture of invention thrives on exploring unknowns not overselling existing methods inductive ai will continue to improve at narrow tasks but if we are to make real progress we must abandon futuristic talk and learn to better appreciate the only true intelligence we know our own thousands of documentary and literary texts written on papyri and potsherds in egyptian greek latin aramaic hebrew and persian have transformed our knowledge of many aspects of life in the ancient mediterranean and near eastern worlds here experts provide a comprehensive guide to understanding this ancient documentary evidence mediating vulnerability examines vulnerability from a range of connected perspectives it responds to the vulnerability of species their extinction but also their transformation this tension between extreme danger and creativity is played out in

literary studies through the pressures the discipline brings to bear on its own categories particularly those of genre extinction and preservation on the one hand transformation adaptation and re mediation on the other these two poles inform our comparative and interdisciplinary project the volume is situated within the particular intercultural and intermedial context of contemporary cultural representation vulnerability is explored as a site of potential destruction human as well as animal but also as a site of potential openness this is the first book to bring vulnerability studies into dialogue with media and genre studies it is organised in four sections human animal violence resistance image narrative and medium genre each chapter considers the intersection of vulnerability and genre from a comparative perspective bringing together a team of international contributors and editors the book is in dialogue with the reflections of judith butler and others on vulnerability and it questions categories of genre through an interdisciplinary engagement with different representational forms including digital culture graphic novels video games photography and tv series in addition to novels and short stories it offers new readings of high profile contemporary authors of fiction including margaret atwood and cormac mccarthy as well as bringing lesser known figures to the fore thanks to the digital revolution even a traditional discipline like philology has been enjoying a renaissance within academia and beyond decades of work have been producing groundbreaking results raising new research questions and creating innovative educational resources this book describes the rapidly developing state of the art of digital philology with a focus on ancient greek and latin the classical languages of western culture contributions cover a wide range of topics about the accessibility and analysis of greek and latin sources the discussion is organized in five sections concerning open data of greek and latin texts catalogs and citations of authors and works data entry collection and analysis for classical philology critical editions and annotations of sources and finally linguistic annotations and lexical databases as a whole the volume provides a comprehensive outline of an emergent research field for a new generation of scholars
