the great financial crisis of 2008 and the ensuing global economic and financial turmoil have launched a search for models for recovery the advocates of austerity present the baltic states as countries that through discipline and sacrifice showed the way out of crisis they have proposed the baltic model of radical public sector cuts wage reductions labor market reforms and

reductions in living standards for other troubled eurozone countries to emulate yet the reality of the baltic austerity fix has been neither fully accepted by its peoples nor is it fully a success this book explains why and what are the real social and economic costs of the baltic austerity model we examine each of the baltic states by connecting national level studies within a european and global political economy thereby delivering comparative breadth that supersedes localized understandings of the crisis thus for each of the three baltic states individual chapters explore the different economic and social dimensions of neo liberal post communism and the subsequent wider global economic and financial crisis in which these newly financialized economies have found themselves especially vulnerable the austerity model adopted by baltic national governments in response to the crisis reveals the profound vulnerabilities created by their unwavering commitment to liberalized economies not least in

terms of the significant exit of their labor forces and consequent population loss this book looks beyond basic financial metrics claiming a success story for the baltic austerity model to reveal the damaging economic and social consequences first of neo liberal policies adopted during transition and latterly of austerity measures based on internal devaluation combined these policies undermine the possibility of longer term recovery and even social and economic sustainability not to mention prospects for successful integration in the now faltering european project that has departed from its social model roots to best serve current and future generations infrastructure needs to be resilient to the changing world while using limited resources in a sustainable manner research on and funding towards sustainability and resilience are growing rapidly and significant research is being carried out at a number of institutions and centers worldwide this handbook brings

together current research on sustainable and resilient infrastructure and in particular stresses the fundamental nexus between sustainability and resilience it aims to coalesce work from a large and diverse group of contributors across a wide range of disciplines including engineering technology and informatics urban planning public policy economics and finance not only does it present a theoretical formulation of sustainability and resilience but it also demonstrates how these ideals can be realized in practice this work will provide a reference text to students and scholars of a number of disciplines this book constitutes the refereed proceedings of the 11th pacific asia workshop on intelligence and security informatics paissi 2016 held in auckland new zealand in april 2016 in conjunction with pakdd 2016 the 20th pacific asia conference on knowledge discovery and data mining the 7 revised full papers presented together with 7 short papers were carefully reviewed and selected from 23 submissions the
