appreciate the cooperation of those authors whose work is published in this collection part a contains four papers which define the various dimensions of disaggregation the paper by martin starr which was the text of his luncheon address at the conference provides several interesting perspectives to the problem although disaggregation suggests tearing apart as professor starr illustrates with his butterfly example it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies the next paper by lee kra jewski and larry ritzman offers a general model of disaggregation for both the manufacturing and service sectors after reading the papers in this section as well as the papers in subsequent sections you will identify other dimensions to hierarchical decision making which go beyond this generalized model
