present research infrastructure is inefficient and frequently produces unreliable results that cannot be replicated even randomized controlled trials reflects the traditional gold standards of the research reliability hierarchy are not without limitations they can be costly labor intensive and slow and can return results that are seldom generalizable to every patient population furthermore many pertinent but unresolved clinical and medical systems issues do not seem to have attracted the interest of the research enterprise which has come to focus instead on cellular and molecular investigations and single agent e g a drug or device effects for clinicians the end result is a bit of a data desert when it comes to making decisions the new research infrastructure proposed in this book will help the medical profession to make ethically sound and well informed decisions for their patients this book gives helpful guidelines on diagnosis for primary care physicians it also provides guidelines on what to say to patients and their families how to give them counselling what medication to prescribe and when to consult a specialist in short this volume presents the knowledge of mental health science in an easily understandable form for practitioners both physicians and others at the primary health care level two versions of icd 10 chapter v primary care version icd 10 pc are presented here 1 a concise version for those with medical training and prescription responsibility 2 a brief version
