the subject of this open access publication is the impact of connected and automated vehicles on the european city and the conditions under which this technology can make a positive contribution to urban development the authors put forward two theses that have received little attention in the scientific discourse so far connected and automated vehicles will not become fully established in all sub areas of the city for a long time as a result previously assumed effects from traffic safety to traffic performance as well as spatial effects will have to be reevaluated to ensure a positive contribution of this technology to the mobility of the future transport and settlement policy regulations must be further developed established territorial institutional and organizational boundaries need to be challenged in a timely manner despite or because of the existing great uncertainties we are at the beginning of a phase of yet shaping the possible future in technology development but also in politics urban planning administration and civil society description of the chapters 1 connected and automated driving the long level 4 mathias mitteregger reflects on the road ahead for automated driving what pathways of technological development induce which kind of spatial effects and planning needs 2 connected and automated driving consideration of the local spatial context and spatial differentiation emilia m bruck and aggelos soteropoulos reflect on the importance of the local context when classifying and estimating the effects of different forms of automated mobility 3 connected and automated driving in the context of a sustainable transport and mobility transformation andrea stickler jens s dangschat and ian banerjee integrate possible potentials of automated mobility in the context of a transformed sustainable transport system part i mobility and transport 4 self driving turnaround or automotive continuity reflections on technology innovation and social change katharina manderscheid reflects on how differing visions of an automated future can be understood with regard to divergent interests in technological development 5 automated drivability and streetscape compatibility in the urban rural continuum using the example of greater vienna aggelos soteropoulos analyses how different street spaces align with technological requirements of automated mobility creating a suitability framework for road spaces in the greater vienna region 6 automation public transport and mobility as a service experience from tests with automated shuttle buses the authors show what types of automated public transport might be used in the future and what can be learned from testing automated shuttle buses in the past 7 delivery robots as a solution for the last mile in the city bert leerkamp aggelos soteropoulos and martin berger describe how automated delivery robots could be contextualized in terms of solving last mile problems and discuss what implications might lie ahead for urban planning part ii public space 8 control and design of spatial mobility interfaces the authors identify the possible implications of automated mobility for mobility interfaces and explore how public spaces could be transformed 9 transformations of european public spaces with avs robert martin emilia m bruck and aggelos soteropoulos use the example of copenhagen to show how public spaces could be transformed in an age of automated urban mobility and benefit from lower car dependency 10 at the end of the road total safety mathias mitteregger discusses how the desire for road safety affects public spaces and how automated mobility influences this discourse 11 integration of cycling into future urban transport structures with connected and automated vehicles looking at the future of mobility lutz eichholz and detlef kurth show that the bike actually offers solutions to many of our current problems and that planning should not forget to integrate cycling into future urban transport structures and systems 12 against the driverless city steven fleming argues for a radical shift in cities towards a highly improved cycling infrastructure eradicating the need for automated mobility part iii spatial development 13 strategic spatial planning smart shrinking and the deployment of cavs in rural japan ian banerjee and tomoyuki furutani show where automated mobility could help tackle pressing issues in rural japan 14 integrated strategic planning approaches to automated transport in the context of the mobility transformation the authors show how new forms of automated mobility could be integrated into mobility systems in diverse spatial structures in the city region of vienna with the overriding goal of the mobility transformation 15 opportunities from past mistakes land potential en route to an automated mobility system looking at the mistakes made in building a car centric environment in the past mathias mitteregger and aggelos soteropoulos identify future areas of urban transformation as a result of a lower demand for car centric infrastructures and businesses part iv governance 16 new governance concepts for digitalization challenges and potentials alexander hamedinger contextualizes the manifold paths towards an automated future with regard to governance and describes how governance concepts might need to adapt in the future 17 how are automated vehicles driving spatial development in switzerland fabienne perret and christof abegg show how automated vehicles are influencing spatial development in switzerland focusing on three different scenarios on the road ahead 18 lessons from local transport transition projects for connected and automated transport andrea stickler looks at local projects aiming at a transformation of mobility practices and reflects on implications for automated transport 19 connected and automated transport in the socio technical transition jens s dangschat looks at societal transformations in the past and contextualizes automated mobility in terms of a possible socio technical transition ahead 20 data driven urbanism digital platforms and the planning of maas in times of deep uncertainty what does it mean for cavs ian banerjee peraphan jittrapirom and jens s dangschat show how continuous digitalization in cities might affect possible uses and implementations of cavs and their accompanying systems an exciting new edition for our popular southwest colorado high country day hikes this new edition has the same trails from ouray and silverton as our 1st edition but we have taken out the 12 crested butte trails and replaced them with 17 new hikes from lake city crested butte colorado 65 scenic day hikes continues to be a popular seller so the 12 hikes we have taken out of this edition are still covered in the crested butte book nicknamed a peak experience lake city is the staging ground for five colorado 14 000 foot peaks handies uncomphagre wetterhorn red cloud and sunshine for peak baggers this is the place to go for hikers who don t want to hike to 14 000 feet you can still hike these trails to lower return points and still experience this grand scenery we have detailed shorter easier sections for all abilities there is much more to the lake city hikes than 14 000 peaks the famous colorado and continental divide trails pass right around lake city we have detailed five different sections of these trails so day hikers can enjoy these amazing backpacker routes so put your boots on and go take a hike this is colorado high country that dreams are made of fully updated in reference to the latest construction standards and new building types sustainable design fully integrated into each chapter over 100 000 copies sold to successive generations of architects and designers this book truly belongs on every design office desk and drawing board the metric handbook is the major handbook of planning and design data for architects and architecture students covering basic design data for all the major building types it is the ideal starting point for any project for each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of as well as buildings the metric handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on

human dimensions and space requirements the metric handbook really is the unique reference for solving everyday planning problems about the author david littlefield is a senior lecturer at the university of the west of england where he teaches in the department of planning and architecture for many years he worked as a writer and journalist david has written co written or edited over ten books on architecture customer reviews this book is a great investment as you will use it throughout your career as an architect i have found that this book is the bible for all planners contains so much information that no designer or planner should be without a copy an essential reference book that should be on the shelf in any design studio the process of user centered innovation how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy innovation is rapidly becoming democratized users aided by improvements in computer and communications technology increasingly can develop their own new products and services these innovating users both individuals and firms often freely share their innovations with others creating user innovation communities and a rich intellectual commons in democratizing innovation eric von hippel looks closely at this emerging system of user centered innovation he explains why and when users find it profitable to develop new products and services for themselves and why it often pays users to reveal their innovations freely for the use of all the trend toward democratized innovation can be seen in software and information products most notably in the free and open source software movement but also in physical products von hippel s many examples of user innovation in action range from surgical equipment to surfboards to software security features he shows that product and service development is concentrated among lead users who are ahead on marketplace trends and whose innovations are often commercially attractive von hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users he points to businesses the custom semiconductor industry is one example that have learned to assist user innovators by providing them with toolkits for developing new products user innovation has a positive impact on social welfare and von hippel proposes that government policies including r d subsidies and tax credits should be realigned to eliminate biases against it the goal of a democratized user centered innovation system says von hippel is well worth striving for an electronic version of this book is available under a creative commons license the bicycle is fast becoming a ubiquitous form of transportation in cities all over the world making our urban spaces more efficient more livable and healthier but many of those bicycles disappear into basements and garages when the warm months end parked there by owners fearful of the cold snow and ice that winter brings but does it have to be that way canadian writer and journalist tom babin started questioning this dogma after being stuck in winter commuter traffic one dreary and cold december morning and dreaming about the happiness that bicycle commuting had brought him all summer long so he did something about it he pulled on some thermal underwear dragged his bike down from the rafters of his garage and set out on a mission to answer a simple but beguiling question is it possible to happily ride a bike in winter that question took him places he never expected over years of trial and error research and more than his share of snow and ice he discovered an unknown history of biking for snow and ice and a new generation designed to make riding in winter safe and fun he unearthed the world s most bike friendly winter city and some new approaches to winter cycling from places all over the world he also looked inward to discover how the modern world shapes our attitudes toward winter and perhaps most importantly he discovered the unique kind of bliss that can only come by pedalling through softly falling snow on a quiet winter night seaports as part of urban centers play a major role in the cultural social and economic life of the cities in which they are located and through the links they provide to the outside world port cities in europe have faced significant change first with the loss of heavy industry emergence of eastern european democracies and the widening of the european community now european union during the second half of the twentieth century and more recently through drivers to change including the global sustainable development agenda and the european union circular economy agenda this book examines the role of modern seaports in europe and consider how port cities are responding to these major drivers for change it discusses the broad issues facing european sea ports including port life cycles spatial planning and societal integration may 2019 saw the 200th anniversary of the first steam ship to cross the atlantic between the us and england and it is just over 60 years since the invention of the modern intermodal shipping container both drivers of change in the maritime and ports industry increasing movements of people e g through low cost cruises to port cities can play a major role in changing the nature of such a city and impact on the lives of the people living there this book brings together original research by both long standing and younger scholars from multiple disciplines and builds upon the wider discourse about sea ports port cities and sustainability you can use this book to design a house for yourself with your family you can use it to work with your neighbors to improve your town and neighborhood you can use it to design an office or a workshop or a public building and you can use it to guide you in the actual process of construction after a ten year silence christopher alexander and his colleagues at the center for environmental structure are now publishing a major statement in the form of three books which will in their words lay the basis for an entirely new approach to architecture building and planning which will we hope replace existing ideas and practices entirely the three books are the timeless way of building the oregon experiment and this book a pattern language at the core of these books is the idea that people should design for themselves their own houses streets and communities this idea may be radical it implies a radical transformation of the architectural profession but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people at the core of the books too is the point that in designing their environments people always rely on certain languages which like the languages we speak allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence this book provides a language of this kind it will enable a person to make a design for almost any kind of building or any part of the built environment patterns the units of this language are answers to design problems how high should a window sill be how many stories should a building have how much space in a neighborhood should be devoted to grass and trees more than 250 of the patterns in this pattern language are given each consists of a problem statement a discussion of the problem with an illustration and a solution as the authors say in their introduction many of the patterns are archetypal so deeply rooted in the nature of things that it seems likely that they will be a part of human nature and human action as much in five hundred years as they are today nacto s urban bikeway design guide quickly emerged as the preeminent resource for designing safe protected bikeways in cities across the united states it has been completely re designed with an even more accessible layout the guide offers updated graphic profiles for all of its bicycle facilities a subsection on bicycle boulevard planning and design and a survey of materials used for green color in bikeways the guide continues to build upon the fast changing state of the practice at the local level it responds to and accelerates innovative street design and practice around the nation the classic work on the evaluation of city form what does the city s form actually mean to the people who live there what can the city planner do to make the city s image more vivid and memorable to the city dweller to answer these questions mr lynch supported by studies of los angeles boston and jersey city formulates a new criterion imageability and shows its potential value as a guide for the building and rebuilding of cities the wide scope of this study leads to an original and vital method for the evaluation of city form the architect the planner and certainly the city dweller will all want to read this book 42 day hikes from arches and canyonlands national parks near moab utah full color reference source for both the novice and advanced bicycle mechanic how to make city cycling the most sustainable form of urban transportation safe practical and convenient for all cyclists cycling is the most sustainable mode of urban transportation practical for most short and medium distance trips commuting to and from work or school shopping visiting friends going to the doctor s office it s good for your health spares the environment a trip s worth of auto emissions and is economical for both public and personal budgets cycling with all its benefits should not be reserved for the fit the water and plants children s active transportation is a rigorous and comprehensive examination of the current research and interventions on active transportation for children and youth as the travel behaviors of these groups tend to be highly routinized and their mobility faces unique constraints such as parental restrictions mandatory school attendance and the inability to drive a motor vehicle before late adolescence this book examines the key factors that influence travel behavior among children and youth providing key insights into lessons learned from current interventions readers will find a resource that clearly demonstrates how critical it is for children to develop strong active transportation habits that carry into adulthood discusses the correlates that exist between children s active transportation using a social and ecological model summarizes active transportation interventions that show what works to increase non motorized modes of travel in children describes the factors that influence the implementation and effectiveness of interventions in this 88 page edition ancient mysteries seeking the lost equator ice age era artifact of a destroyed civilization by kenyon donald shoup brilliantly overcame the challenge of writing about parking without being boring in his iconoclastic 800 page book the high cost of free parking easy to read and often entertaining the book showed that city parking policies subsidize cars encourage sprawl degrade urban design prohibit walkability damage the economy raise housing costs and penalize people who cannot afford or choose not to own a car using careful analysis and creative thinking shoup recommended three parking reforms 1 remove off street parking requirements 2 charge the right prices for on street parking and 3 spend the meter revenue to improve public services on the metered streets parking and the city reports on the progress that cities have made in adopting these three reforms the successful outcomes provide convincing evidence that shoup s policy proposals are not theoretical and idealistic but instead are practical and realistic the good news about our decades of bad planning for parking is that the damage we have done will be far cheaper to repair than to ignore the 51 chapters by 46 authors in parking and the city show how reforming our misguided and wrongheaded parking sarnath 1920 is a fantasy short story by american writer h p lovecraft it is written in a mythic fantasy style and is associated with his dream cycle it was first published in the scot a scottish amateur fiction magazine in june 1920 the doom that came to sarnath and other stories is also the title for a collection of short stories by lovecraft first published in february 1971 according to the tale more than 10 000 years ago a race of shepherd people colonized the banks of the river ai in a land called mnar forming the cities of thraa ilarnek and kadatheron not to be confused with kadath which rose to great intellectual and mercantile prowess craving more land a group of these hardy people migrated to the shores of a lonely and vast lake at the heart of mnar founding the city of sarnath famous works of the author howard phillips lovecraft at the mountains of madness the dreams in the witch house the horror at red hook the shadow out of time the shadows over innsmouth the users environmental quality economic benefit public health and overall quality of life the first ever worldwide standards for designing city streets and prioritizing safety pedestrians transit and successful tools and tactics defined in nacto s urban street design guide and urban bikeway design guide while addressing a variety of street typologies and design elements found in various contexts around the world a comprehensive guide to carbon inside earth its quantities movements forms origins changes over time and impact on planetary processes this title is also available as open access on cambridge core the face of the pedestrian safety crisis looks a lot like ignacio duarte rodriguez the 77 year old grandfather was struck in a hit and run crash while trying to cross a high speed six lane road without crosswalks near his son s home in phoenix arizona he was one of the more than 6 000 people killed while walking in america in 2018 in the last ten years there has been a 50 percent increase in pedestrian deaths the tragedy of traffic violence has barely registered with the media and wider culture disproportionately the victims are like duarte rodriguez immigrants the poor and people of color they have largely been blamed and forgotten in right of way journalist angie schmitt shows us that deaths like duarte rodriguez s are not unavoidable accidents they don t happen because of jaywalking or distracted walking they are predictable occurring in stark geographic patterns that tell a story about systemic inequality these deaths are the forgotten faces of an increasingly urgent public health crisis that we have the tools but not the will to solve schmitt examines the possible causes of the increase in pedestrian deaths as well as programs and movements that are beginning to respond to the epidemic her investigation unveils why pedestrians are dying and she demands action right of way is a call to reframe the problem acknowledge the role of racism and classism in the public response to these deaths and energize advocacy around road safety ultimately schmitt argues that we need improvements in infrastructure and changes to policy to save lives right of way unveils a crisis that is rooted in both inequality and the undeterred reign of the automobile in our cities it challenges us to imagine and demand safer and more equitable cities where no environment transportation in urban areas with its related environmental and social impacts is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems urban transport systems require considerable studies to devise and then safeguard their operational use maintenance and operational safety transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute challenge with financial political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public topics covered include transport strategies public transport systems environmentally friendly transport modes pedestrians and traffic environmental impact intelligent transport systems transport safety and security infrastructure experiences from emerging countries land use and transport integration for more than forty years jan gehl has helped to transform urban environments around the world based on his research into the ways people actually use or could use the spaces where they live and work in this revolutionary book gehl presents his latest work creating or recreating cityscapes on a human scale he clearly explains the methods and tools he uses to reconfigure

unworkable cityscapes into the landscapes he believes they should be cities for people taking into account changing demographics and changing lifestyles gehl emphasizes four human issues that he sees as essential to successful city planning he explains how to develop cities that are lively safe sustainable and healthy focusing on these issues leads gehl to think of even the largest city on a very small scale for gehl the urban landscape must be considered through the five human senses and experienced at the speed of walking rather than at the speed of riding in a car or bus or train this small scale view he argues is too frequently neglected in contemporary projects in a final chapter gehl makes a plea for city planning on a human scale in the fast growing cities of developing countries a toolbox presenting key principles overviews of methods and keyword lists concludes the book the book is extensively illustrated with over 700 photos and drawings of examples from gehl s work around the globe the global street design guide is a timely resource that sets a global baseline for designing streets and public spaces and redefines the role of streets in a rapidly urbanizing world the guide will broaden how to measure the success of urban streets to include access safety mobility for all users environmental quality economic benefit public health and overall quality of life the bicycle has long told us much about cities and their residents in a time when american cities were chaotic polluted and socially and culturally impenetrable the bicycle inspired a vision of an improved city in which pollution was negligible transport was noiseless and rapid leisure spaces were democratic and the divisions between city and country blurred friss focuses not on the technology of the bicycle but on the urbanisms that bicycling engendered bicycles altered the look and feel of cities and their streets enhanced mobility fueled leisure and recreation promoted good health and shrank urban spaces as part of a larger transformation that altered the city and the lives of its inhabitants even as the bicycle s own popularity fell not to rise again for a century publisher s description the world s authority on cycling provides a comprehensive guide to the sport for cyclists of all levels the sport of cycling has experienced an exciting boom in popularity fueled by lance armstrong s success and recent comeback the popularity of triathlons rising gas prices and the need to find a sport that lets people have some fun while they get fit no one knows more about this boom the bonds of death astrology books recordings cycling studies is a rapidly growing area of investigation across the social sciences reflecting and engaged with rapid transformations of urban mobility and concerns for sustainability this volume brings together a range of studies of cycling and cyclists examining some of the diversity of practices and their representation its international contributors focus on cases studies in the uk and the netherlands and on cycling subcultures that cross national boundaries by considering cycling through the lens of culture it addresses issues of diversity and complexity both past and present the authors cross the boundaries of academia and professional engagement linking theory and practice to shed light on the very real processes of change that are reshaping our mobility most of the world s population now lives in cities so if we are to address the problems of environmental deterioration and peak oil adequately the city has to be a major focus of attention ecocities is about re building cities and towns based on ecological principles for the long term sustainability cultural vitality and health of the earth s biosphere unique in the literature is the book s insight that the form of the city really matters and that it is within our ability to change it and crucial that we do further that the ecocity within its bioregion is comprehensible and do able and can produce a healthy and potentially happy future ecocities describes the place of the city in evolution nature and history it pays special attention to the key question of accessibility and transportation and outlines design principles for the ecocity the reader is encouraged to plunge in to its economics and politics the kinds of businesses planning and leadership required the book then outlines the tools by which a gradual transition to the ecocity could be accomplished throughout this new edition is generously illustrated with the author s own inspired visions of what such rebuilt cities might actually look like city cycling made simple north america s cities have long been the domain of the car but thanks to the undeniable benefits of active transport bicycles have an increasing presence in the urban landscape yet our cities weren t designed for bicycles making for intimidating and sometimes dangerous environments for cyclists the confident joyful city rider the number of bicyclists are increasing in the united states especially among the working class and people of color in contrast to the demographics of bicyclists in the united states advocacy for bicycling has focused mainly on the interests of white upwardly mobile bicyclists leading to neighborhood conflicts and accusations of racist planning in bike lanes are white lanes scholar melody l hoffmann argues that the bicycle has varied cultural meaning as a rolling signifier that is the bicycle s meaning changes in different spaces with different people and in different cultures the rolling signification of the bicycle contributes to building community influences gentrifying urban planning and upholds systemic race and class barriers in this study of three prominent u s cities milwaukee portland and minneapolis hoffmann examines how the burgeoning popularity of urban bicycling is trailed by systemic issues of racism classism and displacement from a pro cycling perspective bike lanes are white lanes highlights many problematic aspects of urban bicycling culture and its advocacy as well as positive examples of people trying earnestly to bring their community together through bicycling jeff speck has dedicated his career to determining what makes cities thrive and he has boiled it down to one key factor walkability the very idea of a modern metropolis evokes visions of bustling sidewalks vital mass transit and a vibrant pedestrian friendly urban core but in the typical american city the car is still king and downtown is a place that s easy to drive to but often not worth arriving at making walkability happen is relatively easy and cheap seeing exactly what needs to be done is the trick in this essential new book speck reveals the invisible workings of the city how simple decisions have cascading effects and how we can all make the right choices for our communities bursting with sharp observations and real world examples giving key insight into what urban planners actually do and how places can and do change walkable city lays out a practical necessary and eminently achievable vision of how to make our normal american cities from various disciplines have analyzed the social cultural and political underpinnings of transport contesting its long dominant understandings as defined by engineering and economics still the vast majority of mobility studies and even key works that mention the good life and its dependence on the car fail to consider mobilities in connection with moral theories of the common good in assembling moral mobilities nicholas a scott presents novel ways of understanding how cycling and driving animate urban space place and society and investigates how cycling can learn from the ways in which driving has become invested with moral value by jointly analyzing how driving and cycling reassembled the good city between 1901 and 2017 with a focus on various cities in canada in detroit and in oulu finland scott confronts the popular notion that cycling and driving are merely antagonistic systems and challenges social scientific research that elides morality and the common good instead of pitting bikes against cars assembling moral mobilities looks at five moral values based on canonical political philosophies of the common good and argues that both cycling and driving figure into larger more important moral assemblages of mobility finally concluding that the deeper meta lesson that proponents of cycling ought to take from driving is to focus on ecological responsibility equality and home at the expense of neoliberal capitalism scott offers a fresh perspective of mobilities and the city through a multifaceted investigation of cycling informed by historical lessons of automobility die texte dieses bandes beschäftigen sich mit verschiedenen aspekten des innerstädtischen radverkehrs es handelt sich um texte die im rahmen von arbeiten innerhalb der tu berlin am
