the new england journal of medicine is one of the most important general medical journals in the world doctors rely on the conclusions it publishes and most do not have the time to look

beyond abstracts to examine methodology or question assumptions many of its pronouncements are conveyed by the media to a mass audience which is likely to take them as authoritative but is this trust entirely warranted

theodore dalrymple a doctor retired from practice turned a critical eye upon a full year of the journal alert to dubious premises and to what is left unsaid in false positive he demonstrates that many of the papers it publishes reach conclusions that are not only flawed but obviously flawed he exposes errors of reasoning and conspicuous omissions apparently undetected by the editors in some cases there is reason to suspect actual corruption when the journal takes on social questions its perspective is solidly politically correct practically no debate on social issues appears in the printed version and highly debatable points of view go unchallenged the journal reads as if there were only one possible point of view though the american medical profession to say nothing of

the extensive foreign readership cannot possibly be in total agreement with the stances taken in its pages it is thus more megaphone than sounding board there is indeed much in the new england journal of medicine that deserves praise and admiration but this book should encourage the general reader to take a constructively critical view of medical news and to be wary of the latest medical doctrines in the late 1990s treatment related deaths or complications were the fifth leading cause of death for americans yet healthcare practitioners decried attempts to standardize treatment we re working with people not cars they said the result an epidemic of preventable mistakes in a medical landscape where patients wait for hours in emergency rooms fill out the same paperwork at each visit and increasingly run the risk of being dosed with the wrong medication or having the wrong limb amputated these problems spurred a group of dedicated physicians like paul batalden and don berwick to study the concepts of quality
