The Optimal Personality 2019-03-04 earlier in this century many philosophers of science for example rudolf carnap drew a fairly sharp distinction between theory and observation between theoretical terms like mass and electron and observation terms like measures three meters in length and is 2 celsius by simply looking at our instruments we can ascertain what numbers our measurements yield creatures like mass are different we determine mass by calculation we never directly observe a mass nor an electron this term is introduced in order to explain what we observe this once standard distinction between theory and observation was eventually found to be wanting first if the distinction holds it is difficult to see what can characterize the relationship between theory and observation how can theoretical terms explain that which is itself in no way theorized the second point leads out of the first are not the instruments that provide us with observational material themselves creatures of theory is it really possible to have an observation language that is entirely barren of theory the theory iadenness of observation languages is now an accepted feature of the logic of science many regard such dependence of observation on theory as a virtue if our instruments of observation do not derive their meaning from theories whence comes that meaning surely in science we have nothing else but theories to tell us what to try to observe

Social Rights and Social Policy. Theoretical and Empirical Perspectives 2016 decision making plays a major role in virtually every theory of organizational behavior however decision theory has not provided organizational theorists with useful descriptions of how decisions are made either by individuals or by individuals in organizations the earliest offering came from economics in the form of the normative rational view of decision making the underlying presumption was that decision makers are all striving to maximize return or minimize loss that decisions are based upon unlimited information and that they have the capacity to use the information efficiently they know the options open to them and the consequences of pursuing one or another of those options the optimal course of action is revealed by applying the appropriate analysis and choosing the most profitable option the key concepts are rationality analysis orderliness and maximization and even a moment s thought demonstrates the gap between these concepts and real life experience from the viewpoint of organizational theory the primary problem with the normative view of decision making and by analogy with much behavioral decision research is its reliance on the gamble metaphor that is decisions are characterized as gambles in an effort to capture the inherent risk this metaphor has the advantage of simplicity but it is a flawed simplicity this book is about a different kind of behavioral theory image theory it is a psychological theory of decision making that abandons the gamble metaphor and the normative logic that the metaphor supports instead it sees decision making as guided by the beliefs and values that the decision maker or a community of decision makers holds to be relevant to the decision at hand these beliefs and values dictate the goals of the decision the point is to craft a course of action that will achieve these goals without interfering with the pursuit of other goals the book begins with an overview of image theory that outlines the basic concepts of the theory and a little of its history the next two parts correspond to the theory s two decision mechanisms the compatibility test and the profitability test the final section contains extensions and developments of the theory as well as cognate ideas that have their basis in the theory this book s purpose is to provide in one place the theoretical and empirical work that has been done up to now and to suggest directions for future work

Doing News Framing Analysis 2010-02-26 there is a perceived tension between empirical and theoretical approaches to the study of language many recent works in the discipline emphasise that linguistics is an empirical science this volume argues for a nuanced view highlighting that theory and practice necessarily and as a matter of fact complement each other in linguistic research its contributions ranging from experimental studies in psychology via linguistic fieldwork and cross linguistic comparisons to the application of formal and logical approaches to language exemplify the mutual relationship between empirical and theoretical work the volume illustrates how selected topics are addressed by different contributions and methodological stances topics include the cognitive grounding of language social cognition and the construction of meaning in interaction and closely related pragmatics from a typological perspective and beyond anyone interested in these topics and more generally in meta theoretical considerations will find great value in this volume

Psychology of Time 2006-01-01 speech acts are an important and integral part of day to day life in all languages in language acquisition the need to teach speech acts in a target language has been demonstrated in studies conducted in the field of interlanguage pragmatics which indicate that the performance of speech acts may differ considerably from culture to culture thus creating communication difficulties in cross cultural encounters considering these concerns the aim of this volume is two fold to deal with those theoretical approaches that inform the process of learning speech acts in particular contextual and cultural settings and secondly to present a variety of methodological proposals grounded on research based ideas for the teaching of the major speech acts in second foreign language classrooms this volume is a valuable theoretical and practical resource not only for researchers teachers and students interested in speech act learning teaching but also for textbook writers wishing to have an informed opinion on the pedagogical implications derived from research on speech act performance

Theory and Credibility 2021-07-20 ashworth et al address this key challenge in the field with a new vision of how to connect empirical and theoretical work one rooted in the idea of all else equal theory the authors argue implicitly rests of the idea of all else equal and it s precisely this question that empirical work attempts to confirm thus theory and empirics have an intrinsic connection and in recognizing this scholars can bridge the gap between the two the first part of the book examines the all else equal connection and goes on to show how how theoretical models yield empirical implications and how substantive identification is the lynch pin of a credible research design the second part then follows the progressive back and forth between theory and empirics in existing scholarship breaking these interactions into five types reinterpreting elaboration distinguishing disentangling and modeling the research design

The Demand for Money 1959 the terms mental health maturity personality integration self actualization have been used by psychologists to represent the realm of the ideal or optimal personality originally published in 1974 professor richard coan here describes a method of analysing this domain and examines the important theoretical implications of his findings he developed instruments to measure various characteristics including personal consistency the experience of control and openness to experience which are associated with current concepts of sound psychological functioning a battery containing these instruments was administered to several hundred subjects and analysed the results reported here are enlightening it was found for example that the different characteristics viewed by psychologists as traits of the ideal person do not constitute a unitary pattern there is no evidence of a general dimension of personality integration or mental health a number of independent components or factors of sound functioning were isolated some desirable traits were discovered to be inversely related to each other many of these relationships appearing to involve a choice between an open or spontaneous orientation and a more ordered and controlled orientation the author s view fully supported by his findings is that if people are to achieve maximal realization of their potentials a clear requisite is the flexible utilization of various modes of experiencing and acting
