mechanics is the branch of physics that deals
with the behavior of matter and light on a
subatomic and atomic level it attempts to
explain the properties of atoms and molecules
and their fundamental particles like protons
neutrons electrons gluons and quarks the

properties of particles include their interactions with each other

collapse theories of quantum Sep 08 2021 it is a received view that superluminal signaling is prohibited in collapse theories of quantum mechanics in this paper i argue that this may be not the case i propose two possible mechanisms of superluminal signaling in collapse theories the first one is based on the well accepted solution to the tails problem and the second one is based on certain assignments quantum physics i mit opencourseware Jun 29 2023 this section provides the problem sets assigned for the course along with solutions
