Advanced Human and Social Biology Atmosphere

2000-05-24 And ostracoda
crustacea And are potentially
excellent model organisms for
evolutionary studies because
they combine an extensive
fossil record with a wide recent
distribution and therefore
allow studies on both patterns
and processes leading to extant
diversity the main scientific
domains contributing theories
concepts and data to
evolutionary biology are
morphology including ontogeny
palaeontology genetics and
ecology and to all of these
aspects ostracods can
contribute this is clearly
illustrated by the fifteen papers
presented under theme 3 of the
13th international symposium
on ostracoda chatham uk in
1997 which are grouped in the
present proceedings one of
three volumes resulting from

this meeting the contributions
deal with the evolution of both
extant and fossil forms
including most of the
phanaerozoic ecology of both
marine and freshwater taxa
and developmental morphology
of both soft parts and valves
although the canvas is wide
each paper clearly shows how
studies on ostracoda can be
relevant to general theory on
evolutionary biology and
ecology
