psychology s key principles and concepts and to create dynamic lectures his work is truly revolutionary he has taken the most important of existential experiences and made them transparent for self growth and research linda berg cross phd abpp professor of psychology howard university the main purpose of this research based self help book is to introduce the goal and causal theory of psychological time and to help you calculate your psychological age that is how old you feel based on significant events in your life you can also learn how to lower your psychological age feel younger using past experiences to move into the future rejuvenating the mind for more satisfying personal growth productivity and happiness we humans created the convention of time hours days millennia but we also created psychological time which we can compress to survive an interminable wait for example or expand to luxuriate in pleasure so fully integrated into our brain is this psychological time that as part of the illusion we can lose touch with real chronological time altogether and even change the sequence of past events to contradict or override our otherwise communal understanding of the world in this book you will generate causograms a kind of map that graphically represents your perception of the cause and effect and goal based connections that your mind naturally makes between life experiences these include but are not limited to achievements memories triggered by new experiences and expectations based on prior accomplishments this process allows you to re examine the relation between life events goals and personal interactions then compare your resulting psychological age to your chronological age what a wonderful approach to the human life cycle psychology s key principles and concepts and to create dynamic lectures this volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld it shows how the science of history is the mediator between the human and the natural sciences it demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences finally it shows that the natural sciences and technology are inseparable but that technology is one sidedly founded in pre scientific encounters with reality in the lifeworld in positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences for epistemologists following dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated there is phenomenology interested in psychology and the social sciences that distinguish the natural and the human sciences but little can be found about the historical human sciences this volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio temporal framework for reconstructions and causal explanations of what has really happened students first understanding psychology is written around the philosophy that an effective textbook must be oriented to students informing them engaging them exciting them about the field and expanding their intellectual capabilities because when students understand psychology they learn psychology no matter what brings students into the introductory course and regardless of
