atheists think it is tim crane offers a way out of this stalemate aspects of psychologism is a penetrating look into fundamental philosophical questions of consciousness perception and the experience we have of our mental lives psychologism in tim crane s formulation presents the mind as a single subject matter to be investigated not only empirically and conceptually but also phenomenologically through the systematic examination of consciousness and thought from the subject s point of view how should we think about the mind analytical philosophy tends to address this question by examining the language we use to talk about our minds and thus translates our knowledge of consciousness into knowledge of the concepts which this language embodies psychologism rejects this approach the philosophy of mind crane contends has become too narrow in its purely conceptual focus on the logical and linguistic formulas that structure thought we cannot assume that the categories needed to understand the mind correspond absolutely with such semantic categories crane s claim is that intentionality the aboutness or directedness of the mind is essential to all mental phenomena he criticizes materialist doctrines about consciousness and defends the position that perception can represent the world in a non conceptual non propositional way opening up philosophy to a more realistic account of the mind s nature the remarkable true friendship between george archibald co founder of the international crane foundation who loves birds and a rare whooping crane named tex who
